

SUPPLEMENT TO

The Gazette of Andia.

CALCUTTA, SATURDAY, OCTOBER 6, 1888. No. 40.}

OFFICIAL PAPERS.

A SUPPLEMENT to the GAZETTE OF INDIA will be published from time to time, containing such Official Papers a information as the Government of India may deem to be of interest to the Public, and such as may usefully be mixtured in the Debates of the Legislative Council of His Excellency the Governor General will in future be published PART VI of the GAZETTE.

PART VI of the GAZETTE.

Non-Subscribers to the GAZETTE may receive the Supplement separately on a payment of five Rudges per annum if delivered in Calcutta, or eight. Rudges if sent by Post. The Supplement and Part VI of the GAZETTE can also be subscribed for separately on a payment of Rudges six per annum if delivered in Calcutta or Rudges nine if sent by Post.

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA is required by Law, or which it has been customary to oublish in the CALCUTTA GAZETTE, will be included in the Supplement. For such Orders and Notifications the body of the GAZETTE must be looked to.

DEPARTMENT OF FINANCE AND COMMERCE, (Statistical Branch).

GOVERNMENT OF INDIA. REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, October 1st, 1888.

THE weather of the past week has been such as usually follows immediately the termination of the south-west monsoon rains in Upper India. It was pointed out in last week's report that the storm of September 12th to 20th almost certainly gave the final burst of heavy rain to Upper India, and that the rainfall accompanying this storm was due to humid winds from the Bay of Bengal. The Bombay current retreated considerably earlier than usual from the north and centre of the Arabian Sea in the beginning of September. The following telegram from the Agent, Peninsular and Oriental Company, gives the weather experienced by the last mail steamer in her passage from Aden to Bombay: "Light westerly winds and fine weather prevailed during the voyage from Aden to Bombay. There was a slight swell near Socotra, but from thence to Bombay the sea was smooth, and no current was experienced. The barometer was normal." Fine weather, light winds, and a smooth sea, which are the conditions that usually follow the retreat of the south-west monsoon proper and precede the establishment of the north-east winds of the north-east monsoon, hence prevail at present in the northern half of the Arabian Sea.

The heavy burst of rainfall attending the storm of last week, apparently exhausted for some days the strong, humid current in the Bay, and winds fell off very rapidly in strength towards the end of the past week and were replaced during the week under discussion by light and probably variable winds. The leading conditions of the past week have hence been an unsteady and feeble monsoon in the Bay, and a weak monsoon in the southern half of the Arabian Sea, which has given occasional showers in the Deccan and Southern India.

At the end of last week, fine dry weather prevailed over the whole of India except the south of the Peninsula, which was receiving light occasional thundershowers. The barometer rose slowly during the 24th in Upper India, and the day temperature increased slightly, whilst the night temperature was being rapidly reduced. Moulmein received 1 1 inches, Belgaum 1 inch, and Trichinopoly 1 inch of rain during the day. The barometer was unusually steady during the next 24 hours, and the distribution of pressure on the 26th was practically identical with that of the 25th. Westerly winds extended during the day across Behar into Western Bengal, and light west to north-west winds prevailed over the whole of Northern and Central India on the 26th. Bellary registered on the morning of that day 11 inches of rain, and Maligaon (in Khandeish) 1 inch. No change occurred in Upper and Central India during the next 24 hours, either in the distribution of pressure or in the direction or character of the air movement. The weather was somewhat more unsettled in Southern India, and a large number of thunderstorms, which in several cases gave heavy rain, occurred over the greater part of Southern India including Mysore. Trichinopoly received 2 inches of rain, Wellington 11 inches, Cochin 11 inches, Negapatam 3 inch, and Salem and Bangalore ½ inch. A brisk fall of the barometer took place in Upper India during the next forty-eight hours, and the mean daily temperature decreased 2° in the Punjab. Some showers were received in Burmah, Assam, and Southern India, but the amounts were generally small. Cuddapah obtained 2½ inches during a thunderstorm on the 28th, Sholapur 1¼ inches, and Trichinopoly ¾ inch. The barometer began to rise again on the afternoon of the 29th and continued to rise during the remainder of the week, the rise being large in Upper India, and least in Burmah. The most important effect of these changes was to transfer the area of lowest pressure from the Punjab to Lower Burmah, and at the end of the week a small depression had formed in the Bay of Bengal to the south of Diamond Island. Light showers of no great importance fell on the 30th and the 1st in Burmah and Southern India. Temperature was falling slowly but steadily at the end of the week in Upper India, the air was drier in Northern and Central India, and skies were clear except in Burmah and the Peninsula.

From the preceding sketch of the weather of the past week, it will be seen that the week was entirely or practically rainless over a large part of the country including the Punjab, the North-Western Provinces, North and East Bengal and Assam, the Central Provinces, North Bombay, Rajputana, and the North and Central Coast districts of Madras. Burmah, South and Central Madras, Mysore, Coorg, the Bombay Deccan, and Khandeish were the only areas which received fair rain during the week. As in nearly the whole of these districts the rainfall hitherto has been considerably below the average, the rainfall of the past week has been very beneficial and favourable, more especially in Khandeish and the Bombay Deccan. Thus in Khandeish a slight excess was received, whilst the Bombay Deccan obtained an inch more than the normal average of the week. The rainfall in these districts was, as might be anticipated from the conditions under which it occurred, very local and irregularly distributed. Thus, in the Ahmednagar district the total rainfall of the week ranged from 1 inch to 51 inches, and in the Nasik district from a tenth of an inch at the sudder station to 61 inches at Niphad. The same irregularity of distribution is also shown by the rainfall returns of the Southern Madras and Mysore stations.

The following table shows fully the general character of the distribution of the rainfall of the past week over the whole of India (with the exception of Sind and Mysore, for which the returns are doubtful), and also of the total rainfall of the south-west monsoon period of the present year up to date.

JOHN ELIOT,

Offg. Meteorological Reporter to the Government of India.

E. C. BUCK,

Secretary to the Government of India.

SIMLA, 1st October, 1888.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—For week ending 29th September, 1888.—Rainfall good in all districts, except Kistna, Nellore, Ganjam, and Chingleput: Standing crops generally fair, but withering in parts of Ganjam, Kistna, Cuddapah, Bellary, Anantapur, Chingleput, and Tinnevelly. Want of rain felt in these districts, and in parts of Vizagapatam, Nellore, Kurnool, and Trichinopoly. Agricultural operations progressing fairly. Prices falling in the southern districts, stationary in six and rising in the others. General prospects favourable, and improving in the affected districts.

Bombay.—For week ending 3rd October, 1888.—Water-supply improved in Upper Sind, but still deficient in Karachi, where crops are suffering. Slight rain during week in parts of Thana, Ratnagiri, and Kanara, but good throughout Deccan and Southern Mahratta Country, where crop prospects are greatly improved. Rain urgently needed throughout Guzerat, Kathiawar and in parts of Konkan and Kanara, where crops are withering. Harvesting of early crops progressing in parts of Karachi, Hyderabad, Ahmedabad, Kaira, Surat, Kanara, Kathiawar, and Baroda, and sowing of late crops in parts of Shikarpur, Hyderabad, Kaira, Poona, Ahmedabad, Sholapur, Bijapur, and Dharwar. Cotton damaged by storm, and excessive rain in parts of Dharwar, and by insects in parts of Kathiawar. Rice blighted in one taluka of Kanara, and standing crops damaged by crabs in one taluka of Karachi. Fodder scarce in parts of Kaira, Broach, Khandesh, Sholapur, Belgaum, Kathiawar, and Baroda. Agricultural stock good, except in one taluka of Hyderabad, and the eastern talukas of Nasik. Want of water felt in parts of Ahmedabad and Broach. Prices rising in Broach and Surat.

Bengal.—For week ending 2nd October, 1888.—Showers fell in parts of Bengal Proper and Orissa, but none in Behar and Chota Nagpur. Winter rice is good, except in the flooded tracts of the Burdwan, Presidency, and Orissa Divisions. More rain is now required for this crop throughout Behar, and in parts of the Rajshahye division, and also in the Burdwan district. Early rice and jute are almost harvested. The outturn of early rice is said to be less than the average in several districts in Behar and Chota Nagpur. The bhadoi harvest is proceeding, and is expected to yield a fair outturn, except in innundated places in Patna and Gya, where the outturn of the bhadoi crops will be very poor. Cultivation for the cold weather crops has begun. The condition of the people in the distressed districts of Orissa has somewhat improved.

North-Western Provinces and Oudh.—For week ending 3rd October, 1888.—The rains appear to have ceased, and the weather is now bright and seasonable. The heavy floods of the previous week did considerable damage in Saharanpur. Harvesting of kharif crops has commenced, and rabi sowings are in progress. Supplies are sufficient, and prices of food crops fairly steady. General condition of agricultural stock is good.

Pun'ab.—For week ending 3rd October, 1888.—Slight rain only at Rawalpindi and Peshawar. Prices are rising in Hissar, Rawalpindi, Dera Ismail Khan, and Peshawar, and stationary elsewhere. Harvesting of kharif going on at Umballa and Amritsar. Ploughing for, and sowing of, rabi crops in progress. Rain wanted at Hissar, Ferozepore, and Sialkot. Crops are suffering for want of rain in parts of Lahore and Dera Ismail Khan, otherwise prospects of standing crops are good. No damage done to crops. Stock cattle are

reported healthy. Pasturage or fodder sufficient, except at Hissar and Dera Ismail Khan.

Central Provinces.—For week ending 3rd October, 1888.—Weather clear and warm. Rain urgently required in Jubbulpore, where prices are rising, and also for rice in parts of Seoni and the eastern districts. Prospects otherwise good. Cattle in good condition. Fodder sufficient.

Burma.-No report received.

Assam.—Far week ending 3rd October, 1888.—Weather seasonable. Pulses and oilseeds being sown. Injury to late rice by insects reported from parts of Sibsagar and Kamrup. Prospects of tea and other crops generally good.

Mysore and Coorg.—For week ending 3rd October, 1888.—Rainfall general and good in Mysore. Condition and prospects of crops favourable, but more rain is much required in parts of Mysore and Kolar districts. Sowing operations continuing. Outturn of crops fair. Prices have fallen slightly in Mysore district.

Slight rain in Coorg during the week. Standing crops in good condition.

Berar and Hyderabad.—For week ending 3rd October, 1888.—Weather warm and sultry. Very little rain during the week; more is wanted. Cotton and jowari crops good. Preparations commencing for rabi crops. Fodder insufficient in some places. Prices of food grains rising slightly.

No rain during the week in Hyderabad. Crops withering for want of rain. Scarcity of fodder felt. Prices—wheat 113, coarse rice 11, white juar 18, and tur 15 seers per current sicca rupee.

Central India. For week ending 3rd October, 1888. Rain during the week all over the Agency, except in Neemuch, where it is urgently required. The only changes are crops slightly damaged in Bhopawar, and prices rising in Baghelkhand and Indore.

Rajputana.—For week ending 3rd October, 1888.—Slight rain in Meywar district and Bikaneer; elsewhere none. Agricultural operations unsatisfactory in Sirohi, Meywar, and Harowtee. Standing crops withering for want of rain in many places. Agricultural stock good. Pasturage or fodder at present sufficient, except in Meywar. Prices rising generally.

Nepal.—For week ending 27th September, 1888.—Slight rain. Early mornings are foggy. Weather gradually becoming cooler. Prospects good.

E. C. BUCK,

Secretary to the Government of India.

SUPPLEMENT TO

The Gazette of Andia.

No. 41.} CALCUTTA, SATURDAY, OCTOBER 13, 1888.

OFFICIAL PAPERS.

A SUPPLEMENT to the GAZETTE OF INDIA will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made enough. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in Dear VI of the Carette.

Non-Subscribers to the Gazette may receive the Supplement separately on a payment of five Ruoees per annum if delivered in Calcutta, or eight Ruoees if sent by Post. The Supplement and Part VI of the Gazette can also be delivered in Calcutta or Ruoees nine if sent by Post.

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA is required by Law. or which is the Some customary to publish in the CALCUITA GAZETTE, will be included in the SUPPLEMENT. For such Orders and Notifications the body of the GAZETTE must be looked to.

E. J. SINKINSON,

DEPARTMENT OF FINANCE AND COMMERCE,

GOVERNMENT OF INDIA. PUBLIC WORKS DEPARTMENT. RAILWAY TRAFFIC.

GENERAL RULES FOR WORKING INDIAN RAILWAYS.

No. 1009 R.T., dated Simla, the 25th September, 1888.

RESOLUTION—By the Government of India, Public Works Department.

Read again-

Section 8 of Act IV (the Indian Railway Act) of 1879.

Public Works Department Notification No. 299, dated 13th September 1880, publishing the General Rules for all Railways in India, and Public Works Department Circular No. 17 Railway, dated 21st August 1880.

Public Works Department letter No. 1062 R.T., dated 20th October 1886.

Read also-

Notification by the Government of India in the Foreign Department, No. 1145I., dated the 22nd March 1888.

Public Works Department letter No. 688 R.T., dated the 5th July 1888, to the Resident at Hyderabad.

Memo. from the Resident at Hyderabad, No. 289 Railway, dated the 17th August 1888.

OBSERVATIONS.—In accordance with the provisions of Section 8 of the Indian Railway Act, IV of 1879, as extended to the lands in the territories of His Highness the Nizam of Hyderabad occupied by the Nizam's Guaranteed State Railways Company, Limited, by the notification of the Government of India in the Foreign Department, No. 1145I., dated 22nd March 1888, the Acting Agent of that Railway Company has applied that the General Rules for Indian Railways, which have received the sanction of the Governor General in Council and were published in the Gazette of India, dated 18th September 1880, may be applied to the Nizam's Guaranteed State Railways.

RESOLUTION.—With the exception of Section XVII, which refers to the working of a single line of Railway on the system termed in Rule 3 of the said Rules "Train Despatching," the Governor General in Council is pleased, under Section 8 of the said Act, as so extended, to sanction the application to the Nizam's Guaranteed State Railways of the General Rules for Indian Railways as published in the Gazette of India dated 18th September 1880.

ORDER.—Ordered, that the General Rules, which have already been published in the Gazette of India, be further notified to the railway servants and the public by a copy thereof [with the exception noted], and of this Resolution being kept open to inspection free of any charge in the office of the Station Master of every station on the said railway.

Ordered, also, that this Resolution be communicated to the Resident at Hyderabad for information and guidance, and that it be published in the Gazette of India.

R. C. B. PEMBERTON, Colonel, R. E.,

Secretary.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

WEATHER SUMMARY FOR SEPTEMBER, 1888.

The month of September usually witnesses the retreat of the south-west monsoon currents from Upper and Central India. The period of its withdrawal depends upon the previous general strength of the monsoon and upon the conditions established in Upper India, and usually occurs about the end of the third week of this month. This withdrawal from Upper and Central India is usually a comparatively rapid process. It is followed by light and variable winds for some time, after which the north-westerly and westerly winds of the cold weather or winter season set in and blow more or less steadily during the remainder of the year. The Bengal current continues to give moderate rain in the lower Gangetic plain and Burmah for some time longer, and there is a marked tendency at this period of the formation and advance of large depressions and cyclonic storms in the Bay of Bengal. The Bombay current usually withdraws more rapidly and completely from Upper and Central India than the Bengal current from Northern India, and in the last week of September and in October it gives light to moderate rain, chiefly on the Malabar Coast and in the Deccan and Southern India. This rain frequently occurs at the same time that fine weather and easterly winds prevail on the Konkan Coast or apparently after the south-west monsoon current has entirely withdrawn from the North Bombay Coast districts.

The present monsoon has been characterized throughout by a moderately strong Bengal monsoon current and by an abnormally weak Bombay current. The conditions at the commencement were, as stated in the forecast published in May, favourable in Northern India from Bengal to the Punjab, but were more or less unfavourable in Western India and the Deccan. The meteorology of the month of June showed what was not indicated by the coast observations that there were very unusual conditions prevalent in the north-east of the Bay and perhaps in Lower Burmah. The following account of the meteorology of the month of September shews that these features were present to as marked an extent at the end of the rains as they were at the commencement, and hence were very persistent during the whole monsoon period.

At the commencement of the month a depression which had advanced from the Bay across Chutia Nagpur into the North-West Provinces was filling up. The North-West Provinces and Oudh appear to have played nearly the same part in the meteorology of the south-west monsoon period of the present year that the Central Provinces did last year. They have formed a kind of sink to which many of the storms of the rains have drifted and in which they have finally disappeared.

The chief feature of the month has been two storms which formed in the Bay and passed into Northern India giving more or less heavy rain to the districts over which they advanced. The following gives a brief account of these depressions and cyclonic storms:

First Depression of the 3rd to 11th September.—This depression was shewn by the shift of winds at the Head of the Bay to north on the 3rd to, be in process of formation on that day. General break in the rains obtained over the

whole of North-Western, Western, Central and Southern India, and a partial break in the North-West Provinces and Bengal. The depression developed slightly on the 4th and 5th, and occupied the north-west angle of the Bay on the morning of the 6th. It crossed the Orissa Coast on the afternoon of the same day and passed through Chutia Nagpur on the 7th. It was now shewn to be a feeble disturbance, the depression at the centre not exceeding a sixth of an inch. The storm gave moderate to heavy rain to Bengal, Chutia Nagpur, and Behar on the 6th and 7th. It advanced into the eastern districts of the North-West Provinces on the morning of the 8th when the centre was a little to the south of Benares. The Central Provinces and eastern districts of the North-West Provinces had received moderate general rain during the preceding 24 hours. The depression moved during the day very slowly to the north-west and lay between Benares, Gorakhpur, Lucknow, and Allahabad on the morning of the 9th. Larger amounts of rain were received on the 8th in the Central Provinces and the eastern districts of the North-Western Provinces than on the previous day (Assam on this day also received a moderately heavy burst of rain and a series of thunderstorms gave fairly general and in some cases excessive rain in North-East Madras. Kurnool for example reported 73 inches, and Masulipatam 11 inches on the 9th). The depression on the morning of the 10th, as shewn by the barometric observations at Gorakhpur and Lucknow, was very slight, but there was still a very clearly marked cyclonic circulation. The storm was now approaching the hills to the north of the Gorakhpur and Basti districts, and, as frequently happens in such cases, a tremendously heavy downpour took place in these districts on the 10th and 11th. Bansi in the Basti district received 24 inches, and Maharajgung in the Gorakhpur district 21 inches. According to reports in the newspapers even larger amounts than these were received, 30 inches for example is stated to have fallen in the Lehra Pergunnah. The storm completely disappeared on the evening of the 11th, and fine weather was established over Northern India generally on the 12th.

A brief interval now succeeded before the formation of the second storm of the month. During this period a series of thunderstorms occurred in Western and Southern India which gave fairly general and moderately heavy rain. Thus, on the 11th Bombay received 3½ inches, Salem, Kurnool, and Ratnagiri 2 inches, Poona 1½ inches, and Belgaum and Sholapur 1 inch.

The most important feature of the interval was the gradual extension of the trough of low pressure, which is a normal feature of the season at the head of the peninsula across the centre of the Bay, on the 11th and 12th into Tenasserim and Lower Burmah. The second storm of the month appeared at the eastern extremity of this trough of low pressure on the morning of the 13th and marched along it during the greater part of its existence.

Depression and storm of 13th to 21st September.—This was one of the more remarkable storms of recent years. So far as can be judged from the change of wind directions at the Tenasserim and South Burmah stations it advanced from the Gulf of Siam across the Målayan Peninsula on the 12th and 13th. Its centre was to the north-east of Tavoy on the morning of the 13th. It advanced to the west-north-west during the day and covered the greater part of Lower Burmah and the North of the Andaman Sea on the morning of the 14th when the centre was near Bassein. The depression at the centre now, exceeded a third of an inch. Lower Burmah had very squally weather at this time and heavy rain fell in the coast districts. The storm

crossed the hills in South-West Pegu apparently without deflection of its path or diminution of velocity and advanced in a west-north-west course across the centre of the Bay with an average velocity of nearly 15 miles per hour. The centre at 8 A.M. of the 15th was in about Lat. 19° N. and Long. 90° or 91° E. The storm increased very rapidly in intensity during the day and was a fierce and dangerous cyclone on the evening of the 15th when the barometric depression at the centre certainly exceeded one inch and was probably much larger. It crossed the Orissa Coast near False Point on the morning of the 16th about 6 A.M. The storm-wave accompanying it flooded the low lying districts near False Point, but was much smaller than that of the great False Point cyclone of September 1885, and caused a comparatively small amount of damage. Heavy rain had fallen during the previous 24 hours in Lower Burmah, South Bengal, and Orissa, and skies had clouded over in the Central Provinces and rain was beginning to fall in that area. The storm advanced almost due west during the next 24 hours, and the centre at 8 A.M. of the 17th was midway between Raipur and Nagpur. The depression at the centre was now about three-tenths of an inch. Stormy cyclonic winds prevailed in the Central Provinces, and the general cyclonic circulation extended over the whole of India except the Punjab and Sind. Very heavy rain fell in the Central Provinces on the 17th. Pachmarhi received 61 inches, Seoni 41 inches, Nowgong 41 inches, Saugor 34 inches, Amraoti and Akola 24 inches, and Khandwa and Nagpur 21 inches. During the previous 24 hours the storm centre had continued to advance with an average velocity of nearly 15 miles per hour. It had now reached a critical stage in its existence. In the case of the large storms of the rains proper which advance into the Central Provinces, if a moderate or strong monsoon be blowing on the Bombay Coast they usually continue to advance westwards to the North Bombay Coast into Guzerat, Kathiawar, Cutch, or South-West Rajputana, and sometimes pass out into the Arabian Sea. If the Bombay current be very weak the storm either dies out in the Central Provinces or advances by a northerly course into Upper India, and usually along the trough of lowest pressure in existence immediately previous to the advance of the storm. In the case of the present storm the Bombay current had retreated from the North-East of the Arabian Sea, and as it was an unusually vigorous storm and fed by a powerful indraught from the Bay of Bengal it gradually recurved to north during the next 48 hours. It marched very steadily to the north-west during the 17th, and on the morning of the 18th the centre was about 50 miles west-north-west of Nagpur. Its rate of motion had hence decreased during the preceding 24 hours to an average of 4 miles per hour. Heavy cyclonic rainfall continued to be received in the Central Provinces, and more or less heavy general rain fell over the greater part of the North-Western Provinces, as well as in Bengal and Burmah. Agra registered on the 18th 6 inches, Pachmarhi 51 inches, Roorkee and Ranikhet 41 inches, and Hoshangabad 31 inches.

The storm continued to recurve and on the morning of the 19th was advancing almost due north. The centre was at 8 A.M. nearly midway between Jhansi and Saugor. The depression at the centre was unchanged in amount (03") and the storm was now causing very strong easterly winds over the whole of the North-West Provinces and Behar. Its average rate of motion during the previous 24 hours was 10 miles per hour. The storm on the morning of the 19th covered Bundelkhand, the eastern districts of Central India, South-East Rajputana and the adjacent districts of the North-West Provinces. Very heavy rain was received at this time in the north quadrant Roorkee registering 7¼ inches

at 8 A.M. of the 20th, Delhi 6 inches, and Meerut $5\frac{1}{4}$ inches. The storm advanced during the 19th at an average rate of about 12 miles per hour, and at 8 A.M. of the 20th the centre was midway between Delhi and Meerut. Heavy cyclonic rain was now received in the submontane districts of Meerut, Muzaffarnagar, Saharanpur, Bijnor, and Umballa.

The following gives a statement of the rainfall of the week in these and the neighbouring districts which was almost entirely due to the heavy cyclonic rainfall of the 18th, 19th, and 20th, and illustrates the excessive character of the rainfall:

	Dis	strict.			Average rainfall of week.	Normal average rainfall of week.	Excess.
					Inches.	Inches,	Inches.
Saharanpur					13.80	1.32	12:48
Umballa					12.81	0.76	12.0
Muzaffarnagar					12'10	1.23	10.2
Bijnor					11.25	1.83	9.42
Kumaon					10.68	?	?
Bulandshahr					10.62	0.43	9.89
Delhi					10.10	0.81	9.26
Agra					9.89	0.97	8.92
Meerut			Section 1		8.29	0.70	7:59
Etah					8.11	1.13	6.90

The largest total rainfalls of the week were as follows:

Naini Tal		 	22.90 Inches.
Jagadhri (Umballa Distri	ct)	 	19'20 ,,
Saharanpur		 	17.96 ,,
Bah (Agra District)		 	15.14 ,,
Sonipat (Delhi District)		 	15'10

Rain had now ceased to fall in the Central Provinces and Central India and skies were rapidly clearing. The storm area was very sharply demarcated in the western quadrant, clear skies and light winds prevailing to the west and north of Lahore, whilst strong winds and heavily clouded or overcast skies obtained over the whole of the North-West Provinces, Behar, and Bengal.

The fact that the storm had marched unbroken across the South Burmah hills, the Orissa hills and the Vindhyas, shew that it was one of very considerable altitude. This was further confirmed by the fact that it advanced on the 20th across the Simla hills up to the first line of snows to which it gave a considerable fall of snow. It either filled up on the night of the 20th or marched across the snows into the interior. Skies cleared very rapidly in Northern India, and fine clear weather set in on the 21st over the whole of Upper and Central India. Some showers fell in the coast districts of Bengal and in Southern India on the 22nd and 23rd. Westerly winds set in over Upper India and extended rapidly eastwards and advanced into Bengal on the 24th.

During the remainder of the month fine clear weather prevailed over the whole of Northern and Central India. A large number of thundershowers occurred in Southern India which gave fairly general rain to Khandeish, the Bombay Deccan, Mysore, and the greater part of Southern India in which it was much wanted and where the rainfall up to date was very considerably below the normal. At the end of the month there were slight indications of the formation of a cyclonic storm to the south of Diamond Island.

The barometric observations of the month indicate that pressure was considerably above the average (+ '03 to + '04) in Sind, Cutch, Guzerat, Kathiawar, and West Rajputana, or over the area of most deficient rainfall. It was practically normal over the greater part of Northern and Central India. It was considerably below the average in Lower Burmah ('04) and to a less extent in the south of the Peninsula ('02), in the latter respect resembling the conditions which prevailed in September, 1887.

The table of rainfall given below is based on the returns of the observatories only and is hence very imperfect. The rainfall of the month was excessive in the East Punjab and the North-West Provinces. It was slightly in excess in Mysore and Hyderabad, and was more or less in defect in all other districts. The only divisions in which the rainfall was relatively to the average very largely in defect were Sind and Cutch which were rainless during the month, Guzerat which obtained only 2 per cent. of its normal amount, and the Malabar Coast districts which obtained only 40 per cent., and the Konkan slightly more than 50 per cent. of its average amount. North Bengal also received little more than 50 per cent., and Lower Burmah 60 per cent.

In the remaining districts the deficiency ranged from 10 to 25 per cent.

• The following table shews the amount of rain and the difference from the average during the month of September 1888, according to districts, as far as is indicated by the telegraphic reports:

Districts.	Number of stations.	rainfall in	Difference from the average in September 1888.
Punjab, West	7	2'44	-2.29
" East	4	4.22	+2.74
North-Western Provinces, Trans-Gangetic	9	6.71	+6.44

JOHN ELIOT,

SIMLA, 5th October, 1888.

Offg. Meteorological Reporter to the Government of India.

E. C. BUCK, Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, October 8th, 1888.

The chief feature of the weather of the past week has been a small cyclonic storm which began to form at the end of the previous week to the south of Diamond Island. The coast observations are not sufficient to enable its course to be traced with exactness. It however apparently drifted very slowly to the north-west and then recurved through north to north-east and passed into East Bengal on the 7th, where it broke up. It has been remarkable, more especially when contrasted with the storm of the second and third weeks of September, for the extreme slowness of its motion and its comparative weakness, although it was equally persistent and long-lived. At the end of the previous week weather was squally with strong winds on the south-west Pegu Coast and a small depression was evidently forming. Fine dry clear weather prevailed over nearly the whole of Northern and Central India, and light occasional showers were falling in the Deccan and Southern India. There was slight local disturbance during the day in the Punjab which gave duststorms and showers to the north and north-west districts. The barometer was rising rapidly at this time in Northern India. The depression in the Bay slightly deepened and the centre was probably about 100 miles to the southsouth-west of Diamond Island on the morning of the 2nd. Winds had increased considerably in force at Diamond Island and now indicated the prevalence of stormy weather in the area of depression. Moderate to heavy showers fell at many stations in Southern India during the previous day. For example, Sholapur received 13 inches, Belgaum 1 inch, and Kurnool 3 inch.

Pressure increased generally during the next 24 hours. The area of depression was almost unchanged in position and character, the centre having moved probably not more than 50 miles to the north-west. Moderate general rain fell in Burmah and East Bengal during the day. A few light showers were also received in the Deccan and Southern India. The barometric changes of the next 24 hours were very irregular. The storm continued to drift slowly up the Bay. The centre was probably in about Lat. 17° and Long. 912° at 8 A.M. of the 4th. Heavy rain had fallen over the whole of Lower Burmah during the previous day and showers were commencing to fall in South Bengal. There was also some slight disturbance in the Punjab and western districts of the North-Western Provinces which gave numerous light showers in those areas. The storm centre advanced during the succeeding 24 hours at an average rate of about 8 miles per hour, and was probably in Lat. 19° N. and Long. 892° E. at 8 A.M. of the 5th. The winds at the Head of the Bay had shifted round to north, but were very feeble, thus indicating that the storm was one of small extent and moderate intensity. The barometer had risen considerably during the previous day in Upper India and the weather was very much drier. Skies had cleared in the Central Provinces and the North Deccan. Moderate rain had fallen in Orissa, Burmah, and East Bengal.

The slight disturbance which was in Upper India on the previous day passed across the Chakrata and Simla Hills up to the interior ranges to which they gave a heavy fall of snow, apparently extending down to about 12,000 feet.

The barometer fell rapidly during the next three days (about two-tenths of an inch) in Upper India, but this accompanied no change of weather in Northern India. The storm in the Bay had now advanced to the neighbourhood of the coast of the Sunderbunds. The centre was in Lat. 21° N. and Long. $89\frac{1}{3}$ ° E. at 8 A.M. of the 6th and was now marching to the north-north-east. Moderate general rain had fallen during the previous day in Burmah, Bengal, and Assam, and numerous thundershowers in Southern India and the South Deccan. The storm passed into East Bengal during the next 24 hours, and the centre was a little to the east of Dacca at 8 A.M. of the 7th. The barometric depression at the centre was about a sixth of an inch in amount at this time. Strong southerly winds had set in on the Bengal Coast as the storm advanced inland, but they appear to have hardly exceeded ordinary south-west monsoon winds in force. Rain had been almost exclusively confined to Burmah, Bengal, and Assam during the previous day, the largest amounts being received in East Bengal and Assam.

The storm broke up during the day, and on the morning of the 8th it had apparently disappeared. Rain in moderate amounts was received during the previous day in Assam and East Bengal. On the morning of the 8th, fine dry weather was established over the whole of India, and the rapid rise of the barometer which followed the disappearance of the storm speedily established cold weather pressure conditions over Northern India.

The preceding sketch of the weather shews that general rain fell in Burmah, Bengal, and Assam in connection with the storm. Tenasserim and Lower Burmah received about half an inch more than their normal amounts. Eastern Bengal and Assam obtained the largest amount of rain from their storm. The average actual rainfall of the week in Assam (Surma) was $7\frac{1}{4}$ inches or $5\frac{1}{2}$ inches in excess of the normal average amount. Eastern Bengal received $4\frac{1}{4}$ inches, or $2\frac{1}{2}$ inches in excess. There was a moderate excess (of half an inch), in Deltaic Bengal. The North and West Punjab and the hill districts received a slight excess, and Mysore, the Bombay Deccan and some parts of Madras a moderate excess.

There was general deficiency over the remainder of the country, which was greatest and most marked in North Bengal and North Behar, the Malabar Coast, the Berars, Central Provinces, Guzerat, Central India, and Southern India. There was practically no rain in Behar, the North-West Provinces, Oudh, South Punjab, the Central Provinces, Berars, Guzerat, Kathiawar, Sind, West Rajputana, Hyderabad, and South Madras.

A portion of the rainfall of the week occurred in districts where it has hitherto been more or less deficient. This was especially the case in Khandeish, the Bombay Deccan, Mysore, and East Bengal.

The following table gives rainfall data for the week and also for the whole south-west monsoon up to date for the 51 meteorological and rainfall districts into which India has been divided:

Y12 44 4	A STATE OF THE STA	RAINFALL	DATA FOR WER	R ENDING	RAINFALL	DATA FROM M CTOBER STH. 18	1AY 14TH TO 388.

SIMLA, 8th October, 1888.

JOHN ELIOT,

Offg. Meteorological Reporter to the Government of India.

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—For week ending 6th October, 1888.—No rain in Tinnevelly, poor in Tanjore, Trichinopoly, Madura, Coimbatore, Salem, and Malabar, and good elsewhere. Standing crops generally fair, but withering in parts of Ganjam, Kistna, Tinnevelly, and Coimbatore; want of rain felt in these districts and parts of Vizagapatam, Nellore, Cuddapah, Bellary, Kurnool, Tanjore, Trichinopoly, Madura and Salem. Pasture insufficient in parts of Vizagapatam, Cuddapah, Coimbatore, and Salem, and scanty in Madura and Tinnevelly. Agricultural operations progressing fairly. Prices rising in seven districts, falling in two and stationary in others. General prospects fair, and improving in all the affected districts, except Madura, Tinnevelly, Ganjam, and Vizagapatam.

Bombay.—For week ending 10th October, 1888.—Rain during the week slight in parts of Hyderabad, Upper Sind frontier, Ahmedabad, Panch Mahals, Broach, Surat, and Thana, but good throughout Deccan and Southern Mahratta Country, where crops and grazing are much improved. Total rainfall generally deficient and more needed urgently throughout Guzerat, Kathiawar, and Konkan, where crops are suffering. Harvesting of early crops progressing in parts of Hyderabad, Kaira, Surat, Khandesh, Nasik, Ratnagiri, Satara, Kanara, and Kathiawar, and sowing of late crops in parts of Hyderabad, Kaira, Surat, Khandesh, Nasik, Poona, Sholapur, Satara, Bijapur, Belgaum, and Kathiawar. Cotton damaged by insects in Wadhwan, and standing crops by blight and storm in parts of Hyderabad, by storm in parts of Upper Sind Frontier, and by blight, insects, rats and crabs in parts of Karachi. Fodder scarce in parts of Karachi, Kaira, Khandesh, Nasik and Kathiawar. Scarcity of drinking water left in one taluka of Ahmedabad and parts of Broach. Prices rising in parts of Karachi and Surat.

Bengal.—For week ending 9th October, 1888.—General rain in South-West and East Bengal and Orissa, showers also in North Bengal, while Behar and Chota Nagpur were rainless. Winter rice, except in the inundated places, is generally doing well, but rain is much wanted in Behar, North Bengal and Chota Nagpur. In Behar and Chota Nagpur the bhadoi harvest is still proceeding, and the general outturn is expected to be fair, except in Patna and Gya, where the crop is very poor on account of the floods in August. Cultivation for the rabi crops is proceeding, and in some places the sowing has begun. Prospects in Khurdah and other distressed parts of Orissa have improved.

North-Western Provinces and Oudh.—For week ending 10th Cctober, 1888:—The weather is fine and clear. The early kharif is being harvested and sowings for the rahi are in progress. Supplies are plentiful and prices somewhat steadier though still tending to rise, possibly from the demand for sowing purposes in some districts. Condition of cattle satisfactory.

Punjab.—For week ending 10th October, 1888.—Slight rain in certain districts. Prices are rising in five districts, and stationary in six, but fluctuating in Peshawar. Harvesting of kharif going on at Delhi, Umballa, and Amritsar. Ploughing for, and sowing of, rabi crops in progress. More rain wanted at Hissar and Ferozepur. Crops are suffering for want of rain in parts of Lahore and Dera Ismail Khan. The rice crop is also suffering from drought at Sialkote, otherwise prospects are reported good. No damage done to crops. Stock cattle reported healthy. Pasturage or fodder sufficient, except at Hissar and Dera Ismail Khan.

Central Provinces.—For week ending 10th October, 1888.—No rain, except a few local showers in Sambalpur. Rain urgently required, especially

for rice, in Seoni and Chhattisgarh. The fall is very deficient in Jubbulpore Prospects of cotton and jowari favourable. Winter sowings in progress. Cattle in fair condition. Prices rising in places.

Burma.—For week ending 29th September 1888.—In Lower Burma rice lands that were flooded are still being replanted. In Upper Burma sowing and planting continue. The weather is seasonable, and in Upper Burma, there has been ample rain and the crop prospect is generally good, as it is in Lower Burma, except where rice lands have been flooded. The price of paddy is rising steadily in Rangoon. Prices have also risen in Tharrawaddy, Bassein, Henzada, Amherst, Moulmein, Mandalay, but elsewhere are stationary.

Burma.—For week ending 6th October, 1888.—In Lower Burma flooded lands are still being replanted. In Upper Burma transplanting continues, and in some places early paddy is being reaped. The rainfall has everywhere been ample. In Lower Burma the rice crop promises very well, except where floods have been high. In Upper Burma the crops are generally good. The food supply is not sufficient in the Upper Chindwin nor in parts of Toungoo. The price of paddy has risen in Bassein, Thongwa, Henzada, Moulmein, Toungoo, Tavoy, and Upper Chindwin, and has fallen in Myadaung. Elsewhere prices are stationary.

Assam.—For week ending 10th October, 1888.—Weather seasonable. Sowing of pulses and oilseed continues. Some injury to late rice by insects reported from Sibsagar. Tea and other crops in general doing well.

Mysore and Coorg.—For week ending 10th October, 1888.—Rainfall general and good in Bangalore. Standing crops in good condition, except in parts of one taluk of the Mysore district where they are reported to be affected by excessive rain. Sowing has almost been completed and harvesting of sugarcane commenced. Outturn favourable. No material change in prices.

Some rain in Coorg during the week. Picking of cardamom crop commenced.

Berar and Hyderabad.—For week ending 10th October, 1888.—Weather warm. Slight rain has fallen in Buldana and Basim districts. More rain wanted throughout. Crops good. Picking of cotton commenced in some districts. Preparations for rabi crops continue. Agricultural stock in good condition. Fodder and water insufficient in some parts of the province. Prices almost stationary.

Slight rain during the week in Hyderabad. Kharif crops still withering for want of rain. Scarcity of fodder in almost all taluks. Prices—wheat 11, coarse rice 10, white juar $16\frac{1}{2}$, yellow juar $18\frac{1}{2}$ and tur $15\frac{3}{4}$ seers per current sicca rupee.

Central India.—For week ending 10th October, 1888.—Slight rain in most parts of Central India. Rain greatly needed in Bhopawar, Western Malwa and Neemuch. Prospects in Neemuch are reported gloomy. Standing crops, outturn and agricultural stock are not good. Maize and jowari crops damaged. Pasturage only fair. Prices rising.

Rajputana.—For week ending toth October, 1888.—Rainfall partial and slight. Agricultural operations generally satisfactory, except in Serohi, Meywar, and Harowtee. Standing crops withering in Serohi, Meywar, Harowtee, Ajmere, Kishengurh, and Kherwara, owing to want of rain. Harvest poor generally. Agricultural stock good. Pasturage or fodder sufficient, except in Meywar. Prices still rising in some places.

Nepal.—For week ending 4th October, 1888.—Mornings foggy. Monsoon appears to be over. Winter rice crop is beginning to be in ear. General prospects good.

Letter No. 1150 111-857.31, dated the 5th September 1888, from the Government of the North-Western Provinces and Oudh.

RESOLUTION.

The claims of the University established at Allahabad under Act XVIII. of 1887 to participate in the benefits of the six scholarships established under Home Department Resolution No. \(\frac{1}{45-57} \), dated the 12th February 1886, cited in the preamble, have recently been urged on the consideration of the Government of India. These scholarships have hitherto been placed at the disposal of the Universities of Calcutta, Bombay, Madras, and the Punjab in rotation, the number of scholarships awarded in each year being limited to two. Under this arrangement, the Madras and Punjab Universities elected scholars in 1887, and the two other Universities of Calcutta and Bombay in 1888. The claims of the Allahabad University, however, now render it necessary to effect such a modification in this arrangement as will ensure to each of the five Universities an equal share in the advantages of the scholarships in question. The Governor General in Council is accordingly pleased to decide that, with effect from the year 1889, each of the Universities concerned shall participate in the scholarships in the following sequence:

ORDER.—Ordered, that a copy of this Resolution be forwarded to the Governments of Madras, Bombay, the Punjab, and the North-Western Provinces and Oudh, for information and communication to the authorities of the Universities concerned.

Ordered also, that a copy be forwarded to the Government of Bengal, the Chief Commissioners of the Central Provinces, Burma, Assam and Coorg, and the Resident at Hyderabad, for information; and to the Registrar of the Calcutta

University for information and guidance.

Ordered further, that a copy be forwarded to the Department of Finance for information; and that the Resolution be published in the Supplement to the Gazette of India.

[True Extract.]

A. P. MACDONNELL, Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, October 15th, 1888.

As stated in last week's report, the storm which was the important feature of the weather of that week broke up on the evening of the 7th, and at the end of the week (on the 8th) fine dry weather was established over nearly the whole

On the morning of the 8th pressure was two-tenths of an inch lower in the Punjab than in Ceylon and the south of the Bay. Light westerly winds prevailed in Upper India, and easterly winds on the Bombay Coast. South-westerly winds apparently extended over the whole of the Bay, but were already very weak

and unsteady on the Bengal Coast.

During the next 24 hours pressure increased over the whole of India, slowly in the south of the Peninsula, and rapidly in Northern India. The isobar of
30 00" included nearly the whole of the Deccan and Southern India, which hence
formed the area of maximum pressure at this time. No change of importance
had taken place in the air movement, except that winds were lighter and more unsteady in Bengal. Rain was confined almost entirely to Burmah and Southern India, and fell chiefly during thunderstorms. Cochin registered 21 inches, Wellington 2 inches, Rangoon 13 inches, Calicut 11 inches, Madras, Bassein, and

Tounghoo 1 inch, at 8 A.M. of the 9th.

A further rise varying in amount from '03" in Southern India to '1" in Sind occurred during the next 24 hours, and established approximately uniform pressure over India (the normal condition in October) on the morning of the 10th. A few light showers fell during the preceding 24 hours in Burmah and Malabar, but the amounts were in all cases small. During the next 24 hours the barometer was steady over the whole of India, and the uniformity of the pressure distribution was as marked on the 11th as on the 10th. Winds were slowly shifting round to north-west at the head of the Bay, and to north in Lower Burmah, but were very unsteady on the 11th and 12th. Temperature was slowly Burmah, but were very unsteady on the 11th and 12th. Temperature was slowly but steadily falling from day to day in Upper India. The rainfall of the preceding 24 hours in Burmah and Southern India was even less than that of the pre-

vious day, and was confined to light local showers.

As stated above, the normal October conditions of pressure were established on the morning of the 10th, and during the remainder of the week pressure changed slowly in the oscillatory manner characteristic of fine weather in India. It commenced to fall on the 11th after the prolonged rise of the previous three days, and was on the average '05" lower in all districts on the morning of the 12th. Some light showers again fell in Burmah and South India. The largest

reported rainfall was only four-tenths of an inch (at Coimbatore).

The barometer again fell by nearly equal amounts over the whole of India (excluding Assam) during the next 24 hours. The easterly winds on the Bombay Coast had strengthened slightly and were unusually steady. Light showers fell

at some of the Burmah stations and at Sibsagar.

After the general fall of the previous two days, averaging nearly a tenth of an inch in amount, the barometer began to rise on the afternoon of the 13th. The changes were small during the next 24 hours, and the range of pressure over India on the 14th was barely a tenth of an inch. Northerly winds were fully established during the day in Burmah, and skies cleared in the Coast districts.

During the next 24 hours pressure increased by amounts varying from '01" in South India to '11" in the Punjab and '12" in Rajputana. This transferred the seat of maximum pressure from the Deccan to the Punjab and Rajputana. A rapid decrease of temperature occurred in Upper India and at the hill stations during the day. The cloud amount had increased during the previous 24 hours in Southern India, and a large number of showers (giving in the

majority of cases very light rain) had fallen in Burmah and Southern India.

At the end of the week the pressure and temperature conditions and the winds in Northern India were rather those characteristic of the commencement of the cold weather than of the middle of October. Pressure was very high in the Central Provinces, Hyderabad, and Madras as compared with Burmah,

so that conditions were antagonistic to the commencement of the normal northeast winds of the season which usually give more or less general rain to the West Coast of the Bay, from Gopalpore southwards. The north-east monsoon appears to be established over the whole of the Arabian Sea, and light variable,

or northerly winds over the north and centre of the Bay.

The preceding remarks have shown that the rainfall of the week was unusu-The preceding remarks have shown that the rainfall of the week was unusually scanty, and was confined almost exclusively to Burmah and Southern India, and even in these districts it was much below the normal. No rain was received in Behar, Orissa, the North-West Provinces, the Punjab, Rajputana, Sind, Guzerat, Central India, the Konkan, the Bombay Deccan, the Central Provinces, and the greater part of North Madras. The average deficiency exceeded an inch in the West Coast districts of the Bay (more especially in Ganjam and the Circars), Orissa, Assam, South and Central Bengal, and Chutia Nagpur. It was absolutely greatest in Assam (Surma), where it averaged 2½ inches, and Orissa and Coorg, for which it averaged nearly 2 inches.

The collection of rainfall data by weekly telegrams will be discontinued.

The collection of rainfall data by weekly telegrams will be discontinued from this week until the commencement of next year's monsoon. The following table will hence be the last of the present year's series. It gives a fairly correct view of the actual district rainfall of the present year's monsoon.

The chief feature of the monsoon of 1887 has undoubtedly been the unusual weakness of the Bombay current, shown partly by the deficient rainfall over the whole of the peninsula except the West Coast districts, and partly by its very early and rapid retreat. The Bay current has been quite up to its ordinary strength, but in consequence of the peculiar pressure conditions in Upper India it was drawn away from East and North Bengal towards the Gangetic plain and Upper India.

The following gives a brief and general summary of the district rainfall of

the past monsoon:

Burmah and Assam have received normal and on the whole favourable rain. The whole of the Province of Bengal, with the exception of North and East Bengal, have obtained normal amounts of rain. The rains held off at the commencement of the season, but set in generally during the last week of June and were fairly abundant. The deficiency in North and East Bengal averaged 20 per cent. The rains ceased somewhat earlier than usual in Bengal on the 8th of October.

The rains have been unusually abundant in the North-West Provinces and Oudh, more specially in South Oudh, which has received 35 per cent. in excess, and the central districts of the North-West Provinces which have had the very large average excess of 19 inches or 59 per cent. above their normal amount.

The rainfall of the season was normal or in moderate excess in the Eastern Punjab. It was largely in defect in the South Punjab (37 per cent.), and in the North-West and West Punjab (32 per cent.).

The rains have been on the whole most deficient in Guzerat, Kathiawar, and

Sind, or in the same districts in which they were very scanty last year. Guzerat received only 52 per cent. of its normal amount, Kathiawar 37 per cent., and (if the returns be correct) Sind only 5 per cent.

Rajputana and Central India received on the whole their average amount,

but the rainfall was very irregularly distributed, and the rains also terminated very early in the middle of September.

In the Central Provinces and Berars the rainfall throughout the whole

season was steadily below the average. The deficiency for the whole season averaged 15 per cent. in the Central Provinces, and 23 per cent. in the Berars. In these districts the rains also terminated much earlier than usual about the 15th September.

In the West Coast districts south of Guzerat the total rainfall is above the average to a moderate extent, heavy rain having fallen in July and August. The rains, however, ceased in the Konkan in the middle of September and at

least two weeks earlier than usual.

Over the greater part of the peninsula (excluding the Bombay Deccan, in which there was slight excess accompanying very irregular distribution) the south-west monsoon rains have been very largely in defect. Thus in Khandeish the deficiency averages 32 per cent., in North and Central Madras it averages 27 per cent., and in South Madras 44 per cent. The returns for Mysore and Hyderabad are very defective, but apparently show that the deficiency was as large at least as in the neighbouring districts of Madras.

SIMLA, 15th October, 1888.

JOHN ELIOT,
Offg. Meteorological Reporter to the
Government of India.

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA. REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—For week ending 13th October, 1888.—No rain in Ganjam and Madras; scanty elsewhere. Standing crops generally fair, but withering in Ganjam, Kistna, Bellary, Tinnevelly, and Coimbatore; want of rain felt in these districts and in parts of Vizagapatam, Nellore, Cuddapah, Anantapur, Kurnool, Tanjore, Madura and Salem. Pasture scanty in parts of Kistna, Trichinopoly, Madura and Tinnevelly, and insufficient in Vizagapatam, Cuddapah, Kurnool, Coimbatore, and Salem. Agricultural operations progressing fairly. Prices rising in nine districts, falling in six, and stationary in others. General prospects fair except in Ganjam, where they are had in Ganjam, where they are bad.

Bombay.—For week ending 17th October, 1888.—Slight rain during week in parts of Dharwar, Broach, Kanara, and Kathiawar; more rain needed urgently in parts of Khandesh and Nasik and throughout Guzerat, Konkan, and urgently in parts of Khandesh and Nasik and throughout Guzerat, Konkan, and Kathiawar, where crops have mostly suffered; more also required, especially for late crops in parts of Poona, Ahmednagar, Sholapur and Bijapur. Harvesting of early crops progressing in parts of Karachi, Hyderabad, Upper Sind Frontier, Ahmedabad, Kaira, Surat, Khandesh, Nasik, Thana, Poona, Satara, Bijapur, Belgaum, Kanara, and Kathiawar, and sowing of late crops in parts of Hyderabad, Upper Sind Frontier, Ahmedabad, Kaira, Surat, Nasik, Poona, Ahmednagar, Satara, Sholapur, Belgaum, Dharwar and Kathiawar. Standing crops damaged by blight in parts of Hyderabad. Probable outturn of cotton in Baroda six, and in Shikarpur twelve annas. Fodder scarce in parts of Kaira, Khandesh, Ratnagiri, Kathiawar and Baroda. Want of drinking water felt in parts of Kathiawar. Prices rising in Panch Mahals, Surat, Sholapur and Ratnagiri.

Bengal.—For week ending 16th October, 1888.—Slight showers have fallen in Burdwan, Bankura, Nuddea, Jalpaigori, and Backergunj, but none in other districts. Rain is generally much wanted except in the eastern districts, where there was heavy rain on the 6th and 7th instants. In Behar, the want of rain has affected the winter rice in most parts, but elsewhere the condition of the crops is still good. Ploughing for, and sowing of, the rabi crops, are proceeding, but rain is required for these crops also in some of the Behar districts. Some distress is reported in the flooded tracts of the Burdwan and Presidency Divisions. The condition of the people in the distressed parts of Orissa has improved.

North-Western Provinces and Oudh.—For week ending 17th October, 1888.—Weather bright and seasonable. Kharif crops being harvested. Rabi ploughing and sowing in progress. Supplies ample and prices of food grains on the whole stationary. General condition of the agricultural stock continues good.

Punjab.—For week ending 17th October, 1888.—No rain. Prices stationary in most districts. Harvesting of kharif crops commenced in many districts. Ploughing for, and sowing of, rabi commenced in nearly all districts. More rain wanted at Hissar, Lahore and Dera Ismail Khan. Crops are suffering for want of rain in parts of Lahore and Dera Ismail Khan, and those dependent on Bara Capal in Peshawar have almost dried up. No damage done dependent on Bara Canal in Peshawar have almost dried up. No damage done to crops. Stock cattle are reported healthy. Fodder sufficient except in Hissar, Dera Ismail Khan, and in Pindigheb in the Rawalpindi District.

Central Provinces.—For week ending 17th October, 1888.—Rain urgently required in Jabalpur both for autumn crops and winter sowings; it is also required in Seoni, Nunar, Nagpur, and in the eastern districts for rice. In Bilaspur the rice crop is expected to yield nothing except where irrigated.

Autumn crops being cut, and winter sowings in progress. Jowari and cotton favourable. Prices rising in places.

Burma.—For week ending 13th October, 1888.—In Lower Burma crops are progressing favourably. Slight damage was caused to crops by floods and excessive rain in Akyab and Toungoo. In Upper Burma transplanting continues, and in some places early paddy is being reaped. In Lower Burma the rainfall was fair, and in Upper Burma scanty; while no rain fell in Mandalay, Lower Chindwin, Myingyan, and Pakokku. In Lower Burma crops promise well generally, and in parts of Upper Burma the crop is reported to be better than that of last year. Rice is scarce in parts of Toungoo, but no severe distress is anticipated; rice is also scarce in Upper Chindwin. The price of paddy has risen in Rangoon, Bassein, Amherst, Tavoy, Sagaing, and has fallen in Henzada and Shwebo. Elsewhere prices are stationary.

Assam.—For week ending 17th October, 1888.—Weather seasonable. Sowing of pulses and oilseeds progressing. Prospects of tea and other crops in general, good.

Mysore and Coorg.—For week ending 17th October, 1888.—Rainfall general, except in parts of the Bangalore, Kolar, and Hassan districts, where more is needed. Standing crops in good condition; prospects of season generally good. No material change in prices.

Slight rain in Coorg during the week. Standing crops good. Picking of cardamom crops completed.

Berar and Hyderabad. For week ending 17th October, 1888.—No rain during the week. Rainfall hitherto insufficient; one good shower wanted. Standing crops in fair condition. Cotton in flower. Sowing of rabi commenced. Fodder insufficient. Prices of food grains rising.

Slight rain in Hyderabad during the week, except in Shahabad and Pattur taluqas; kharif crops withering for want of rain. Scarcity of fodder felt generally. Prices rising.

Central India.—For week ending 17th October, 1888.—The following are the only changes since last report. Rain reported insufficient for rabi sowings. In Bundelkhand outturn of harvest reported indifferent. Pasturage and fodder fair in Western Malwa. Rain badly wanted in parts of Kuksi, Jhabua and Dhar.

Rajputana.—For week ending 17th October, 1888.—Rainfall again very slight and partial. Agricultural operations unsatisfactory in Sirohi, Kherwara, Meywar, Harowtee and Kishengurh. Standing crops have suffered for want of rain in Sirohi, Harowtee, Ajmere, Kishengurh, Meywar and Kherwara. Harvests poor generally. Agricultural stock good. Pasturage or fodder sufficient except in Kherwara and Meywar. Prices rising in some places.

Nepal.—For week ending 11th October, 1888.—No rain. Winter has begun. Late autumn rices almost ready to be harvested. Outturn good.

Oudh and Rohilkhund		21,21,133	6,62,439	8,31,436	20,34,445	34,209	1,19,518
Total		37,93,357	2,98,473	24,11,752	40,93,186	6,01,984	18,08,412

^{7.} The increase in the store balances during the year under review on the South Indian Railway is due principally to heavy shipments of permanent-way materials for renewals of line, and that on the Bombay, Baroda and Central India Railway is attributed to large imports of English stores especially coal which did not reach India until after 31st December 1887, and which could not therefore be issued although brought on to the Indian Books.

8. On 31st December 1887, the value of the stores in stock on Guaranteed Railways exceeded the limits provisionally assigned for Capital to be locked up in stores to the following extent:

	Railway,		Limit assigned.	Stock in hand.	Excess.

Submitting reports on the condition of lower classes of the population in India.

RESOLUTION.

1. In the Resolution which was issued in December 1881 on the organization of Agricultural Departments, and which dealt with the recommendations of tion of Agricultural Departments, and which deaft with the recommendations of the Famine Commissioners for the protection of the country against scarcity, distress and famine, His Excellency the Vicercy in Council directed that an analysis of agricultural tracts should gradually be set on foot with the view, firstly, of ascertaining in what parts of the Empire the agricultural population and the lower classes of the people are suffering from an insufficiency of food and the lower classes of the people are suffering from an insufficiency of food argueultural capital; secondly, of discovering the causes of any conditions of degradation which might be found to exist; and, lastly, of suggesting or providing such remedies as might be found necessary or desirable. The policy of the Famine Commissioners was explained to be the maintenance of agricultural operations at a high standard of efficiency. The Government of India fully accepted its obligation to assist in the accomplishment of this important duty. It was urged upon Local Governments and Administrations that efficiency of agricultural operations could only be maintained at a proper standard by securing that cultivators and labourers, their families and cattle, are properly fed, and their need for labour and agricultural appliances adequately met. Insufficiency of food was pronounced to be one of the leading causes of agricultural degradation, and on this account as well as on account of the suffering due to an inadequate food-supply, to be a question which demanded the fullest investigation by Agricultural Departments. the Famine Commissioners for the protection of the country against scarcity,

The Government of India is aware that since the issue of the Resolution of 1881, the new Departments have been occupied in organizing a system under which complete information will eventually be collected regarding the condition and prospects of each village or tract of agricultural land, and which will ultimately lead to an intimate knowledge of the circumstances of the lower classes in every part of British India. The existence of distress and of the causes which may have produced it will then, it is anticipated, have been fully examined, and the time will then come for the application of the remedies which must, so far as they are within the means of the administration, be provided. His Excellency the Governor General is not, however, satisfied to leave to a future time, of which the distance is as yet unknown, the commencement of positive action towards the fulfilment of a duty which the Famine Commissioners appointed by Her Majesty's Secretary of State declared to be one of the most necessary functions of the Government. The recent expenditure of capital upon railways and canals has, it is true, done much in two important directions to provide for the protection of the lower classes against searcity and distress. But there are some other remedies enumerated in the 10th paragraph of the Resolution already quoted which in His Excellency's opinion admit to some extent at least of early application. Prominent among these is the promotion of emigration whether to Colonies or to other parts of British India. It is with the latter question—the promotion of inland emigration—that the present Resolution will deal.

2. It will be well in the first place to advert to the emigration which already to a certain extent obtains in some parts of India, and to notice the more salient points indicated in the Census reports of 1881.

The relief afforded by emigration to the Colonies of Great Britain, France, and the Netherlands, which have within the last ten years taken only 151,955 Indian immigrants; is too small to meet the difficulties revealed by the Census returns of 1881. The movement is, however, beneficial to India, and may with the revival of the sugar trade again assume its former proportions. In any case the fact that natives of India can be induced even to this extent to emigrate to foreign countries seems to show that the problem with which we have to deal is not as hopelessly insoluble as it has sometimes been represented to be, and to justify the belief that they may be induced to move in larger numbers to unoccupied lands in the Indian Peninsula and Burma. There is, however, an advantage attending Colonial emigration which is wanting in any scheme which can be proposed for a comprehensive system of migration within India—in that the capital necessary to enable the emigrant to leave his home and to establish himself abroad is supplied by the planter. This advantage is also held out to emigrants who proceed to the tea gardens of Assam, and it is believed that during the last ten years nearly 300,000 persons have migrated thither; but although the relief thus afforded by the field of employment in Assam is undoubtedly perceptible, and is likely to become still more valuable as communications improve and capital increases, there are climatic influences which must at present preclude Assam from becoming a field for colonization on any very large scale. The annual movement of population to Burma, Ceylon, and the Straits Settlements is also considerable, and serves to keep up the standard of comfort in districts like Madura in Madras.

The census taken in 1881 disclosed the fact that in parts of India the pressure of population had reached a point beyond which further increase would be attended with danger. In Bengal eight districts had a village population of more than 700 souls to the square mile, and the mean of the eight districts was reported to have "reached the astonishing figure of 802.66." In the North-Western Provinces and Oudh twenty-one districts had a population of more than 500 to the square mile; and in Benares, Ballia, Jaunpur, 'Azamgarh, and Lucknow the mean density of population per square mile exceeded 700. In the Punjab no such figures were attained, but in eight districts the rural population varied between 300 and 400 per square mile—a condition of things which suggested the remark that "in the most populous districts the capacity of the soil to support agricultural population had been strained to the utmost."

Madras had no single instance of an entire district in which the density exceeded 600, and in the ordinary settled districts the extremes of density varied from 583 per square mile in Tanjore and 515 in Vizagapatam to 91 in Kurnool; but in certain taluks of the Tanjore district aggregating an area of 1,323 square miles the density of population was 877 per square mile. In Bombay the density of normal population nowhere reached a high figure; but the census taken in that Presidency indicated that in some districts the struggle for subsistence was severe.

As was to be expected, the density of the rural population was found to a great extent to depend on the fertility of the soil and on a favourable rainfall. In one district a population even of 800 to the square mile may live in comfort, while in another 200 to the square mile may mean starvation. But there can be little doubt that even in the most fertile districts of India, in some of which, as in Azamgarh, the population amounts to over 1,000 to each square mile of cultivation, the situation must be perilous.

Among other facts brought to light by the census operations of 1881 was the migration within India of large numbers of people from the province of their birth; and this fact suggested to His Excellency the Viceroy the desirability of, in the first place, instituting an enquiry into those cases in which a considerable population had been induced to move from overcrowded districts to sparsely inhabited tracts. The practical object of the enquiry was to set forth the agency or influences employed to initiate such movements, the difficulties attending them, and in the case of unsuccessful efforts, the causes of failure. The result has been the acquisition of valuable information, which is published in a condensed form as an Appendix (B) to this Resolution.

3. In anticipation of the detailed analytical examination of agricultural tracts, which it is the duty of the Departments of Land Records and Agriculture eventually to provide but which may not be fully worked out for many years to come, His Excellency next considered it desirable that an enquiry should be made into the condition of the lower classes of the population, with a view to discovering what localities are on account of the pressure of production and insufficiency of produce in present need of relief

population and insufficiency of produce in urgent need of relief.

The replies to the enquiry thus instituted are, on the whole, of an encouraging nature, and testify to the great progress in the prosperity and protection of agricultural interests which has followed the extension of railways and canals. But the Government of India desires it to be distinctly understood that the enquiry to which reference is now made was necessarily only of a cursory and incomplete character, and in no way super-sedes the obligation, placed upon Departments of Land Records and Agriculture by the Resolution of 1881, to continue to work out the careful analysis of agricultural tracts, which is necessary in order to ascertain with certainty and precision in what localities any section of the lower classes of the population is suffering from insufficiency of food, or from other causes which tend to a degradation of agricultural operations and to local distress. In the meantime the enquiry which has been made enables the Government of India to place before Local Governments and Administrations a sketch (Appendix A) of the general condition of the lower classes in India, and to indicate roughly the localities in respect to which it appears desirable to examine the question whether the inland migration can be usefully encouraged.

4. It may be stated briefly that, over the greater part of India, the condition of the lower classes of the agricultural population is not one which need cause any great anxiety at present. The circumstances of these classes are such as to secure in normal seasons physical efficiency for the performance of agricultural work, though in the tracts classed as "insecure" there is always a risk in the event of a failure of the rains, that the more indigent class of the people may be overtaken by distress in various degrees and forms, and be deprived of the wages ordinarily provided by the agricultural operations on which in normal seasons they depend for their livelihood. There is evidence to show that in all parts of India there is a numerous population which lives from hand to mouth, is always in debt owing to reckless expenditure on marriages and other ceremonies, and in consequence of this indebtedness and of the fact that their creditors, the middlemen, intercept a large proportion of the profits of agriculture, does

not save, and has little or nothing to fall back upon in bad seasons. Nevertheless, in the majority of cases, there is no sufficient cause for the direct interference of Government.

In one or two parts of the country, however, there seem to be grounds for anxiety. In Behar, it is believed, that 40 per cent. of a population of 15,313,359 is in a state of agricultural degradation. The chief remedy suggested by the Government of Bengal is emigration. Emigration to the Colonies, to the teapler testing of Assembly and with for greater of the colonies. plantations of Assam, and with far greater effect to the eastern districts of Bengal, already relieves, in a certain measure, the congestion of population in Behar, but the obstacles of climate and language and the risk to health in reclaiming land in Assam or Eastern Bengal have hitherto impeded emigration on a larger scale. In the North-Western Provinces and Oudh there is now no evidence of marked agricultural degradation, and even in districts such as Ballia, where the density of population is over 700 to the square mile, the fertility of soil which is the cause of the density of population secures general prosperity. Still the census figures, which show that in twenty-one districts there is a population of more than 500 to the square mile, suggest the inference that the time may not be far distant when it may be necessary to relieve over-population by some comprehensive scheme of emigration. This remark espe-cially applies to the districts east of Lucknow. And although the Govern-ment of the North-Western Provinces and Oudh is of opinion that there is at present nothing which demands special action in those Provinces, it recognizes as the best corrective for local distress the emigration of the surplus population from one part of the country to another. In the rest of India, with the one exception of the Ratnagiri District in the Bombay Presidency, no precautionary measures of exceptional character seem to be immediately called for; so that in existing circumstances Behar is the tract which demands the chief and closest attention of the Administration. But as before remarked the enquiry which has been made and which has led to the above conclusion is only of a preliminary character, and must be supplemented by the careful analysts of agricultural tracts which was enjoined on Departments of Land Records and Agriculture in the Resolution of 1881.

5. In considering the areas which are or may be rendered available for the relief of these overpopulated districts (which may briefly be described as the alluvial region between Lucknow and Patna), it will be convenient to make some attempt to group unoccupied tracts under the several classes into which they naturally fall when certain well marked physical peculiarities are taken into consideration. The classification thus roughly assumed is not however put forward as accurate or exhaustive.

Land which is either unoccupied or insufficiently occupied may be divided into four classes:

- (a) culturable land which can support no population without irrigation;
- (b) culturable land which can support only a scanty population until supplied with irrigation or other protection against drought;
- (c) waste culturable land which when reclaimed can support a full population;
- (d) land unculturable owing to natural causes inherent in the soil.

Broadly speaking, the entire country west of a line from Peshawar to Bikanir and Bikanir to Karachi lies within class (a), and comprises about a third of the Punjab, with Sind, and the adjacent Native States. The average monsoon rainfall is much below 10 inches; the soil, though fertile, is arid, except along the line of rivers; water occurs only at a considerable depth, and wells are difficult of construction. Expanding population in these tracts must follow canal irrigation, which has been largely extended in recent years both in the Punjab and Sind, and will continue to be developed as rapidly as means permit.

The second division (b) embraces the regions to which the south-west monsoon gives only a rainfall varying from 10 to 30 inches. It is split into two sections, a northern and a southern, which together occupy about a third of the whole peninsula. The northern section lies within the angle formed between a line from Peshawar to Allahabad and a line from Allahabad to

Baroda, and is of course exclusive of the tract already classed under (a). The southern section is roughly represented by the interior of a triangle having the delta of the Godavery for its apex and the inner line of the Western Ghats for its base. Though spirsely populated, these regions are already almost wholly occupied, and the areas at the disposal of Government for almost wholly occupied, and the areas at the disposal of Government for colonization are small. But even if extensive areas were available, it is open to grave doubts whether Government would act wisely in encouraging the increase of population in these districts. Except in the lower half of the southern section, which is fed by the north-east or cold weather monsoon, the rainfall is exceedingly precarious, and the population has at various periods been reduced by famine. Of recent years railways have done much to open been reduced by famine. Of recent years railways have done much to open up these tracts; but while improved communications will mitigate the loss of human life from starvation, they exercise no protective influence on agricuiture, or the principal agencies through which agriculture is maintained-water and cattle. Protection can only be efficiently afforded by artificial irrigation, and in a great part of the tracts in question the means of irrigation are wanting, while in others the soil is unsuited for irrigation.

A consideration of climatic conditions and physical characteristics leads to the conclusion that the area grouped under the second class, though large and in parts fertile, affor Is little or no suitable outlet for redundant population.

A more hopeful prospect is offered by the tracts which may be grouped under class (c.) These comprise the whole of the sub-Himalayan belt, large tracts in the Central Provinces, the unreclaimed forests lying between those Provinces and Madras, and so much of Burma as is not yet cultivated. A great part of this area, particularly in Burma, is at the disposal of Government; the soil is fertile, and the rainfall sufficient and regular. There is already a spontaneous expansion of agriculture going on; but ample opportunity exists for a more rapid and regular effort at colonization. In the central and western sub-Himalayan tracts there is perhaps but little land which could be utilized, while in the central portion of the same belt which lies below. Deriveding and in Assem the eastern portion of the same belt which lies below Darjeeling and in Assam, waste lands are already being opened up under the influence of European capital and improved communications, and it would seem unwise to interfere with or hasten this development. But in the Central Provinces there exists a fairly considerable area of Government land possibly suitable for emigrants from the North-Western Provinces; and in Burma, where the acquisition of the Upper Province has given to India an accession of culturable land, of which the area is sufficient to meet the needs of the redundant population of Madras and Bengal for many years, there are extensive tracts fitted for settlers from those Provinces. His Excellency the Governor General in Council has consulted the Local Governments as to the measures which may be taken to bring these lands under colonization.

Coming to class (d), it may be said to comprise all the barren tracts of pure rock, sand and saline soils which are to be found scattered over India, and which amount roughly to one-sixth of the total area of British territory. Though at present unfitted to support population, certain of these tracts may by skilful treatment be rendered culturable; and with this object in view, it is of importance that they should be retained in the possession of Government. The measures which may be taken for their reclamation deserve discussion; they do not, however, come within the scope of the present enquiry.

6. It is of importance to bear in mind the exact words of the Famine Commissioners when alluding to a possible scheme of migration. They spoke of the "physical wants and the mental and moral idiosyncracies of the Indian agricultural population," and the following typical instances of migration, which will be briefly noticed, show that these wants and idiosyncracies require most careful attention.

The Jegdispur jungle in the Shahabad district, Bengal, about 8,000 acres in extent, was cleared by Government, and a lease of it given to a European firm. The whole area has been reclaimed, and is now cultivated by a thriving tenantry. In 1859 there was not a single inhabitant. In 1881 the population was 8,597. The success in Jagdispur is, to a large extent, due to the cautious manner in which the lessees proceeded. They did not risk failure by gathering too many emigrants at a time. They found that a very few families sufficed to too many emigrants at a time. They found that a very few families sufficed to

form a nucleus; and that when once a reasonable prosperity was assured to them, other families soon followed in their footsteps. They found it necessary to place some one in charge of their emigrants, who could communicate with the authorities, help them in their troubles, whether domestic, social or agricultural, and prevent them from getting into debt to money-lenders. Materials for roofing their huts, and assistance in the way of loans of seed, cattle and implements, were given, and the emigrants were secured in a right of occupancy after they had ploughed and sown the land.

In the Chanchal estate in the Maldah district, in Bengal, a ridge of waste about six miles in length was reclaimed by the Manager of the estate, who induced some 30 families of Santals to settle. For the first year the Santals were helped with seedgrain, and were given employment of various descriptions until their crops were fit to cut. Light rates were charged, and in ten years the number of families increased from 30 to 300.

Another instance of Santal migration deserves to be mentioned, In 1880 the Indian Home Mission to the Santals after prospecting the neighbourhood of Guma Dwar in the Goalpara District of Assam took twenty Santals there as pioneers to build sheds for the coming settlers. At the beginning of 1881 220 Santals started and after surrounting many difficulties they have established nine villages with a population of some 700 persons. They metain their own village system, they settle their differences among themselves and are all now well to do The success of the movement is due to the fact that it has been led and supervised by practical Europeans of the Mission who possessed the confilence of the Santals. Government has also assisted by defraying the travelling expenses of the emigrants from the Santal Parganas to Guma Dwar and by granting advances free of interest to the settlers until they could reap a crop of their own.

There are numerous other instances of successful reclamation effected by capitalists, which will be found in the Appendix (B) to this Resolution. A scheme of colonization, which was directly initiated by Government, deserves to be noticed here as the circumstances attending its failure furnish an useful lesson. The details of the Charwa colonization scheme were as follows. An agricultural colony was to be established in the Charwa jungle, in the west of the Hoshangabad district, Central Provinces, the site proposed being within a few miles of the Bombay road and the Great Indian Peninsula Railway; the land was rich and the climate good. The colonists were to be drawn from the Kurmi, Jat, Ahir, and other good cultivating castes in the trans-Ganges portion of the Allahabad and adjoining districts, and in the neighbouring parts of Oudh, and they were to be numerous enough to permit of 10 villages of 50 families each being founded. Men of character and influence were to be attracted to lead the emigration by promises of revenue free land. The colonists were to be transported by rail to Charwa; and when there, were to be supplied with plough cattle and agricultural implements. The settlement of each family was estimated to cost Rs. 200. The requisite funds, amounting to one lakh of rupees, were made available on condition that all rents paid by the colonists until the expiry of the settlement of Hoshangabad were repayment of the amount advanced. In sanctioning the scheme the Government of India was not sanguine as to its success; and the subsequent history of the Charwa colony justified this doubt. It will be seen, in the first place, that one of the conditions which led to success in the Jagdispur estate was neglected in the Charwa scheme, and that an attempt was made to found offhand 10 villages of 50 families each. Recruitment on so large a scale made it difficult to exercise much selection; and owing to the unfortunate choice of an agent for recruiting, the great majority of the persons who were located in Charwa, amounting at one time to 211 families of 1,056 souls, were not really cultivators; and even those of them who were accustomed to agricultural work were by no means the substantial rayats whose settlement it was the object of the scheme to promote. In addition to this mistake in the selection of the settlers, which in itself was fatal to success, there was an entire absence of leaders among the people, and consequently of any bond of union to enable them to overcome the hardships necessarily incident to any attempt to colonise an uncultivated tract in a new country. The scheme failed utterly; and although its failure was almost entirely due to a neglect of the principles upon which it had been based and sanctioned, the discouraging experience of the Charwa colony has perhaps led to exaggerated ideas of the difficulties attending large reclamation and colonization projects.

It is also instructive to notice the various attempts made by Government to encourage emigrants to settle in Lower Burma. In 1874 Bengal immigrants were introduced into Burma under a three-years' agreement. Most favourable terms were given, and about 7,000 persons were imported. Of these, 800 absconded and returned to India; some found employment on the railways, roads, and canals; some few enlisted in the police; others took to domestic service; and a very small number settled down to cultivation in the Moulmein district. The expenditure on this scheme amounted to nearly 3 lakhs of rupees, of which only $1\frac{3}{4}$ lakhs was recovered.

In 1876 a scheme was started to introduce labour from Madras. The immigrants bound themselves under contract to work at a certain rate of wages, and Government undertook to pay them the specified wages, if no other employment were found for them. The scheme proceeded on the erroneous assumption that there were large employers of labour in Burma, who would gladly avail themselves of the services of the coolies, and who might induce the immigrant families to settle down on farms in the country. About 758 persons were imported and the scheme was abandoned at a loss to Government of Rs. 37,448.

In 1882 the Behar emigration scheme was introduced. Again most favourable terms were offered by Government. The passage of each family was paid to Rangoon, and their conveyance to the village in which they were to live was defrayed by Government. Houses were supplied, and food given, free of cost, until wages could be earned; and work was assured to able-bodied labourers for one year. After completion of a year's work holdings of culturable land in proprietary right of an area varying from 10 to 20 acres were to be allotted to each family. These holdings were to be exempt from land revenue for five years. Finally a special officer was to be deputed to take charge of the colonists and to guard their interests. About 70 men and 4 women were sent to the Pyuntaza plain. They remained for a few weeks on the sites selected for them, receiving Government rations and doing but little work. At the end of that time they abandoned their homes, and took employment as coolies on the railway line, or returned to Rangoon. The scheme failed after costing Government Rs. 33,000.

The failure of the above schemes has been attributed by local officers to three causes:—

- (i) The dislike of the natives of India to abandon their homes and to settle down in a foreign country. The result of this feeling is, that only the lower classes of the population, who are useless as agricultural settlers, can be induced to move.
- (ii) The agency which Government is compelled to employ is very varied, and the agents often induce the people to abandon their homes by fallacious promises, the non-fulfilment of which produces discontent among the immigrants.
- (iii) Government is unable to watch over the immigrants, and protect them against the petty annoyances which they meet with in a new country amongst people differing from them in language and customs.

It may be remarked in connection with this explanation of failure that the experience gained from Colonial emigration does not support the view that the classes who are induced to move are useless as agricultural settlers, and suggests the theory that the success attending Colonial emigration is due to the existence of an agency for recruiting which understands its work. Language is an undoubted difficulty but not of serious importance, if colonization is carried out on prudent lines.

The inferences which may perhaps be drawn from the history of the Charwa scheme in the Central Provinces, and the three attempts in Burma, are, that if private capitalists are forthcoming, it will be better to work through them-than to undertake direct responsibility on behalf of Government, and that personal supervision and continuity of effort are essential to success.

7. It is encouraging to turn from these records of failure to the consideration of a scheme which has been carried out in the Multan district in the Punjab under careful personal supervision and with laudable continuity of effort. The Sidhnai canal in Multan was opened in May 1886, and can irrigate about 48,000 acres annually. The area irrigable from the canal was almost entirely destitute of population; and it was necessary to attract cultivators from other districts. For four months the Deputy Commissioner of the district failed to obtain any cultivators; but at last one man came down to prospect. He was satisfied, and returned to his home in the Lahore district, whence he brought a number of his relatives. He was allowed to choose his own watercourse; and fortunately the first crop sown gave a good outturn. Thereafter the Deputy Commissioner was inundated with applications for land; and by March 1888 some 600 adults of the cultivating classes, emigrants from other districts, were settled on plots averaging 90 acres each. The scheme has proved in every way successful; and its success is due to the fact that the Deputy Commissioner watched the location of immigrants, carefully selected the men who were to bring their relatives and friends to his district, and corresponded freely with Deputy Commissioners of other districts as to the class of men he wished to settle on the new lands.

In congratulating the Punjab Government on the manner in which this measure has been carried through, His Excellency the Governor General in Council considers that the lines laid down by that Government may be found within certain limits applicable to other parts of India. In the first place, recruitment proceeded under the supervision of district officers; and the greatest care was taken in the selection of leaders. Next, arrangements were made to enable the settlers to irrigate their lands at once, and thus, at the first harvest, to obtain a crop, without which the cattle could not have been fed. Takavi advances were freely given; and settlers were encouraged to sink wells. Lastly, as far as it was possible, men of the same brotherhood or caste, or in some way connected and having common interests, were settled in the same village.

It is, however, evident that the movement of population from Lahore to Multan involves far less change of climate of social customs and of language, and far fewer difficulties, than the translation of population from Bengal to Burma, or from the North-Western Provinces to the Central Provinces; but His Excellency feels assured that, with a liberal and wise use of the provisions of the Land Improvement Loans Act and the Agriculturists' Loans Act, and with fair rules for the lease of waste land, accompanied by proper supervision and continuous effort, the measure can be commenced and sustained with no very great outlay of capital.

The offer by the Local Government of a fairly liberal lease of 15,000 acres of waste land in the Tennasserim Division has recently induced a well-known pioneer of colonization schemes to undertake at his own expense the settlement in Lower Burma of agriculturists from Behar, and to endeavour to introduce new staples and new methods of agriculture, and it is hoped that others will

follow this example.

8. Before coming to any decision as to the measures which should be advocated for the colonization of waste tracts, His Excellency in Council desired that the opinion of those officers who would hereafter be employed in directing the movement should be obtained; and accordingly at the beginning of April last a Conference of the Directors of the Provincial Departments of Land Records and Agriculture was held at Delhi, at which, with the permission of the various Local Governments, the question of moving population to unoccupied tracts was discussed. The details of such movements received careful consideration, and the difficulties experienced in the past were fully set forward. The Conference was agreed that it was desirable to take measures for generally promoting the policy, and that in

particular every facility should be given to emigrants from Behar and the North-Western Provinces for obtaining land in the Central Provinces, or in Burma. It was pointed out that the people of Behar had much in common with the natives of the Central Provinces, and that a ryotwari settlement might be offered to immigrants from crowded districts of Bengal in the latter Province, but that such a system of settlement would greatly depend for its success on the liberal grant of advances by Government under the Agriculturists' Loans Act. The question of working through capitalists was discussed; and it was agreed that when capitalists or adjoining landowners were ready to undertake schemes of colonization, it would be better to employ them and afford to them every reasonable facility. The Conference was of opinion that the best plan for carrying out a scheme of colonization from one Province to another would be to appoint in each a Special Officer, acquainted with the agricultural conditions of his own Province, for the conduct of operations or negotiations with capitalists; to circulate information as to the precise terms on which land could be obtained in the Central Provinces, Burma, and elsewhere, the nature of the soil, and the climatic conditions of the neighbourhood. The three chief difficulties which, in the opinion of the Conference, beset the scheme of colonization were climate, expense of moving and settling, and language; and in appraising the success which had attended the Sidhnai colonization in the Punjab, they noticed that these difficulties had hardly been present. Two courses seemed open in moving population on a large scale to Burma or the Central Provinces, viz., either to trust to capitalists working for their own profit, or to adopt a system of emigration, under the supervision of Government officers, with advances made by Government. Although the latter course might not in some cases prove financially averaged. cially successful, yet, considering the importance of the end in view, the Conference did not deprecate a trial of it, and their conclusions have been placed for consideration before the Local Governments chiefly interested.

The question has so far been viewed under one aspect, that of the necessity of relieving congested tracts. But there is another important aspect under which it must be regarded, viz., that of the desirability of promoting the wealth of the country by developing the cultivation of tracts now lying waste and unproductive. This financial consideration is one which should not be left out of sight; and while commending the scheme to Local Governments as a means of meeting the exigencies of over population, His Excellency in Council trusts that the ultimate financial benefits of the movement may induce the various Administrations concerned to deal with the question in a

liberal and far-seeing manner.

9. It must be remembered that the Government of India is in a very position now from that in which it stood when the report of the Famine Commission was presented and when the schemes of emigration which have been alluded to in paragraph 5 of this Resolution were undertaken. large tract of country has recently been added to the Empire in Burma, and though the information about its agricultural capabilities is necessarily incomplete at present, it cannot be doubted that the annexation of Upper Burma will help to solve the problem of relieving the congested tracts India on a scale and in a manner which could never have been obtained, by emigration to the limited and unhealthy area of the Central Provinces. It has been held by those who have considered the question that a large initial mortality must be expected in the reclamation of waste lands, and this opinion, so far as it relates to tracts in the Central Provinces, in the Terai, and in Assam, is more or less based on experience. But as at present advised the Government of India does not anticipate that the climate and conditions of Upper Burma will prove prejudicial to the health of the Indian agriculturist, and it seems in every way expedient that attention should be chiefly directed to that country as the possible field for relieving over-population in India. The first essential in colonization in India is the opening out of communications, and it is found that when once good roads are established population moves along them easily and rapidly. A great step has been already made by the construction of the railway to Mandalay, and feeder roads will probably bring within the reach of emigrants land of excellent quality. In the past the 'G

subsidies to steamers plying to Rangoon produced a much larger influx of population than any of the schemes which were directly undertaken by Govern-

Some preliminary proposals of a practical nature have already been submitted by the Chief Commissioner of Burma, and are now under the consideration of the Government of India. Large grants of land to capitalists are advocated, and it is proposed to set aside 100,000 acres for this purpose in Lower and Upper Burma. It is recommended that the grantees should be allowed to settle their own terms with tenants, that the grants should at first be made on liberal conditions, that precautions should be taken to avoid the importation of immigrants at inconvenient seasons when employment is not forthcoming, that care should be taken in the selection of immigrants, that they should not be kept in depôt in Rangoon, and lastly, that no immigrants except those who come to settle as cultivators should at first at any rate be

accompanied by their wives.

10. It is especially important that the Chief Commissioners of Burma and the Central Provinces should collect information which would show the area of waste land available for cultivation, the nature of the soil, the character of the cultivation practised in the vicinity, the climatic conditions of the neighbourhood, the routes by which the land may be reached, and the conditions under which the land is to be leased. This information will be published in all Provinces of India, the Governments of which should require the Departments of Land Records and Agriculture to take early steps towards disseminating among the people of overcrowded tracts the particulars furnished by the Chief Commissioners, to submit definite proposals for further suitable action, and to encourage the development of such schemes as that which has already secured the colonization of a tract in Lower Burma by settlers from Bengal.

It will be convenient in conclusion to summarize the measures which the Government of India has, under the direction of His Excellency Lord Dufferin, already taken in connection with the subject of inland emigration: Firstly, the obligation has been placed upon Departments of Land Records and Agriculture to ascertain in what tracts relief is needed. Secondly, an enquiry has been instituted into the facts and circumstances under which population now moves from one part of India to another. Thirdly, an enquiry has been made into the condition of the agricultural population in all parts of India. Fourthly, the subject has been with the permission of the Local Governments, discussed at a Conference of the Directors of the Departments, of Land Records and Agriculture whose proceedings have been placed before them for consideration. Fifthly, the Governments of the North-Western Provinces and Bengal, which contain the most crowded tracts, were invited to depute officers to the Central Provinces and Burma for discussion with the authorities there of the procedure which should be adopted.

It now remains for the Local Governments concerned to submit their opinion and advice to the Supreme Government.

ORDER.—Ordered, that a copy of the foregoing Resolution be forwarded to

Govt. of Madras.
Ditto Bombay.
Ditto Bengal.
Ditto North-Western Provinces and Oudh.
Ditto Punjab.
Chief Commissioner, Centra Provinces. Chief Commissioner, Burma.

Chief Commissioner, Assam.
Chief Commissioner, Coorg.
Chief Commissioner, Ajmere,
Secretary for Berar to Resident at Hyderabad
†Agent to the Governor General,
Rajputana.
Resident at Mysore.
Resident at Hyderabad.

Local Governments and Administrations* for information and guidance and to the Foreign Department for communication to the Political officers named in the margin.+

Also that the Resolution be

published in the Supplement to the Gazette of India,

[True Extract.]

E. C. BUCK,

Secretary to the Government of India.

Appendix A.

Précis of the Reports received on the enquiry made into the condition of the lower classes of the population.

There are many points brought to notice in the reports which are universal throughout the country. The indebtedness of the agriculturist, and his dependence on the money-lender, is a common feature in all Provinces. The absence of thrift is a very prominent characteristic of the people; and it is not an exaggeration to say that over the greater part of the continent the small cultivators and labourers live from hand to mouth. The prevailing custom of extravagant expenditure on marriages and other ceremonies appears in every report. The depression of certain classes of artisans, whose occupation has disappeared before the inroad of foreign goods, is noticed in most Provinces; but there is evidence that this class is finding new forms of employment, and the fact need not cause much anxiety.

The information given regarding diet, clothes, and houses is both useful and interesting. In Bengal the two meals a day, with rice as the staple food, change in the North-Western Provinces and Oudh into three meals a day, consisting of maize, millets, and pulse, and, as the spring crop is harvested, of barley, peas, and gram, eked out with vegetable pottage. Milk everywhere is a great auxiliary; and in normal years the people seem to enjoy a rude plenty. In the Pubjab the ser aia, i.e., two pounds of flour, is the ordinary ration; and this is supplemented by pulse, vegetables, and condiments. Similarly in Bombay the ration of an adult man consists of two pounds of grain, chiefly millets, and occasionably rice and wheat, helped with pulse and condiments. In Sind the diet is more generous. Meat is not unfrequent, and milk or curd and ghi seldom absent. In Madras a wage of 6 rupees a month enables a whole family to have three meals a day of rice and ragi (millet), with toddy or fish (near the coast), and butcher meat once or twice a week. But such a wage does not admit of the use of milk, butter-milk, or ghi.

The information given about clothing is valuable, for the style of dress very often reflects the condition of the rural poor, while the evidence as to the general use of ornaments and jewelry suggests that the mass of the people have a margin they could fall back upon when labour was not forthcoming. In Bengal the dress of an ordinary peasant is a dhooti, or cloth worn round the waist and reaching down to the knee, and a piece of smaller cloth called a gumcha, or scarf. This serves the double functions of a towel at the bathing ghât, and a turban in the fields. Some can afford the luxury of a shirt or piran and a chadur, or long scarf worn on the upper part of the body, a pair of slippers and an umbrella. The women wear a single dhooti or sari wrapped round from the head to the wankles. The ordinary ahooti costs about one rupee. "Their clothes are always scanty, not so much from poverty, as from the fact that they are not used to wearing much clothes." In Behar a rezai, or quilt, is added to the wardrobe for winter use. Trinkets and jewelry are common, and it is a noticeable fact that for blanket for the cold weather. The women and children are worse off. A village woman rarely has any wraps. Most of them have a padded quilt or blanket for the cold weather. The women and children are worse off. A village woman rarely has any wraps. Most of them pass the nights in their day clothes—a cotton petticoat, wrapper, and bodice. "As a rule, they and the children sleep in the cold weather during the warm afternoons and the early hours of night, and from midnight to dawn cower over a fire of rubbish in the yard of the dwelling house." Mr. Irwin, in Rae Bareli, comments on the scarcity of warm clothing. He found among 173 persons only 10 blankets, 16 rezais (quilts stuffed with cotton) and 24 quilts; so that more than three-fourths of these persons went through the winter with no better covering than the common sheet. There is evidence to show that during the three months of severe cold, viz., from December to February, t

the North-Western Provinces and Oudh, though the use of rezais is probably more general in the colder climate of the Punjab. In Bombay full information is given. The usual clothing of a man consists of shoulder and waist cloths, jacket, turban and shoes, with a blanket for protection against cold and damp. A woman has a petticoat, bodice and cotton wrapper, and generally shoes. The earlier tribes wear scantier clothing and spend about Re. 1-6-0 on their dress. For agriculturists generally the cost of clothes varies from about 4 to 5 rupees. In Madras nothing is said as to clothes. In Assam the dress of the people is above their station in life. In Berar, the people are well clad. In the Central Provinces but little clothing is wanted, and the people apparently possess this. It should be noticed in conclusion, that the use of ornaments is almost universal.

The houses of the agricultural classes are of the most primitive description, but they serve the purpose of shelter. Bengal appears to be worst off in the matter of houses. Mud-walls and a thatch, or bamboo walls, when as in Behar the soil is such, that mud-walls cannot be built, make up the simple architecture of Bengal. In Orissa the houses are built on each side of a fairly wide street with a background or garden. There ventilation is possible, and the houses are neat and clean. Elsewhere it may be said that the houses are dark and entirely without ventilation. Nothing is said about houses in the North-Western Provinces and Oudh, and the Punjab. In Bombay the style of house varies. In Gujerat houses are either tiled or that ched, with walls of bamboo or mud. In the Decean stone and sun-dried bricks are used. In the Konkan wattle-walls appear, while in Sind the vast majority of the lower classes are contented with a thatched wattle-walled hut of tamarind twigs, which would cost about Rs. 3 a year. The Government of Madriss states that the old thatched hut is being largely replaced by the house. In the Central Provinces there are the usual huts, wattle-walled, clay or sundried bricks, with a grass thatch. In Assam the houses of the poorest peasants though constructed of the flimsiest materials are considered to be far more commodious than those of persons of a similar class in other parts of India.

It is to be noticed that there is far more prosperity in the eastern than in * Area 12,115 sq. m. Population 3,574,048, the western districts of Bengal. In the Chittagong* Division the cultivators and agricultural labourers are described as being in a state of at least comparative comfort. The people of Chittagong are mostly agriculturists; and even daylabourers, domestic servants, &c., have their patch of land, which is cultivated by them or their families.

> Their houses are larger and better than the houses in Western Bengal; they wear better clothes; they eat better food, not infrequently flesh-and can afford to remain idle, and to amuse themselves for days together. Several reasons are given for the prosperity in *Chittagong*:—the low assessment of land revenue; the security from failure of the principal crop—rice; the fertility of the soil; and the facilities of water-carriage. One opinion is given by a Native official, which is utterly opposed to that given by all the other officers of the division. He considers that the struggle for existence is becoming harder; that the rise in wages has been more than counterbalanced by a rise in the price of provisions; and that the export of rice is an evil.

The condition of things in the Dacca* Division is still more prosperous though it should be remembered that the weavers, potters, and some other castes or classes, who cling to an hereditary employment in places where it has ceased to be remunerative, or in numbers exceeding the demand, are no doubt in bad circumstances. Mr. Larminie, the Commissioner, writes that, "looking to their needs, the peasantry of Eastern Bengal are about the most prosperous in the world." In Central Bengal, which is composed of the Presidency† and Rajshahye‡ Divisions, with the Purneah§ and Maldah districts, the agricultural classes are almost as prosperous as those of Eastern Bengal. The labourer gets from 3 to 4 annas a day; and there is a great demand for skilled labour. In Moorshedabad, ¶ in the extreme west of the division, the wages of agricultural labour sometimes fall to 2 annas a day, which may be considered as the minimum consistent with the unstinted supply of food to ordinary families; but, with this exception, Central Bengal is a tract where the question of deficiency of food does not arise. The Collector of Maldah writes that "cultivators with holdings less than the average (5 acres) have in ordinary years more than enough to live upon in a way that implies the best physical condition of which the climate and their habits admit, and with a margin to provide against an occasional bad season." The weavers are badly off, but the rest of the artizans are fairly well off, and the labourers, though living poorly and from hand to mouth, are not on the verge of destitution. A large proportion of them undergo suffering in bad years and need urgent relief in times of severe drought or flood. In Purneah the climate is enervating, and the population indolent, but in ordinary years the cultivators are "extremely comfortably off." The report of Mr. Smith, Commissioner of the Presidency Division, contains few opinions, but many facts of importance-

"Good seasons go to balance bad seasons in the matter of the mahajan's bill. During times of searcity heavier debts are incurred, which are paid off in years of plenty. I nature of a native of the lower classes to accept advances wherever he can get them. edness seldom means starration, but usually quite the reverse."

Mr. Forbes writes:

"The general conclusions to which the result of the enquiries points are that, while the "The general conclusions to which the result of the enquiries points are that, while the upper classes of cultivators, holding directly from the zamindar, are in easy and independent circumstances, the under-tenants, though paying comparatively high rents, are still able with ordinary case to provide themselves with a sufficiency of food and clothing and other necessaries."

"there is no cause for anxiety under any ordinary circumstances, such as have obtained for many years past, as regards any class of the labouring population suffering from an insufficiency of food-supply."

Mr. Smith's report should be read, as it abounds in useful statistics. His remarks upon beggars are interesting, and the following passage possesses an

interest in connection with famine relief :

"The natives of the country, both Hindus and Mahomedaus, though by custom and religion exceedingly charitable, are not actively so. The recipients of charity must come to their doors to be fed. The result is that the sturdy beggar prospers while the sick and infirm, who are beggars not by choice but from necessity, are often left to starve unpitied, and their condition does not awake any active feeling of sympathy among their neighbours."

The facts quoted by Mr. Smith regarding beggars show that this numerous class is a great drain upon the resources of the agricultural classes.

The Burdwan* Division, with the Metropolitan District of Hooghly, + Howrah + Area 13,856 sq. m. Population 2,393,954 The Burawan Division, with the Metropolitan District of Hooghty, Thourant Area 13,555 eq. m. Population 7,303,656 and Burdwan, has the full benefit of the neighbourhood of Calcutta. It has been affected by the Burdwan fever, which while reducing the population has also tended to increase the demand for labour and to keep the supply of land for cultivation undiminished. "Under such conditions it appears that a sufficient maintenance may be earned even by a people debilitated by recursing illness." Area 13,555 eq. m. Population 1,223 eq. m. Population 1,223 eq. m. Population 1,223 eq. m. Population 1,301,523. ring illness.

Mr. Toynbee, the Collector of Hooghly, whose evidence before the Famine Commission as Collector of Patna was of a somewhat gloomy nature, now

"The condition of the poorer classes in this district, compared with that of the same classes in England, may unhesitatingly be described as superior in every respect. There is no such thing as want or starvation among them, and not one individual who does not know, when he rises in the morning, how or where he will procure food for the day. Their wants are few and easily satisfied. The climate in which they live and all their surroundings are enervating and, to our view, demoralizing; ambition they have none, beyond the immediate wants and wishes of the day; but judged from their own point of view, and by their own standard, they are prosperous and contented; and I doubt not that there are thousands upon thousands of the English poor who will gladly change their places with them."

In Burdman District, the effects of the fever are poinfully prominent.

In Burdwan District the effects of the fever are painfully prominent. "The sickly physique is now the ordinary physique and commands the ordinary labour rates. The healthy physique is the exceptional one and commands special and very high rates." But in spite of the fever Mr. Oldham, the Collector, is able to state after a very careful enquiry:

"Finally, taking the rates of food which have prevailed for the last 13 years, they have enough with which to procure, and they do procure, a sufficiency of wholesome food enough to support their wives, children and dependent relatives; to bestow on their universal charity; to expend on festivals and celebrations, and to enable them to meet at least versal charity; to expend on festivals and celebrations, and to enable them to meet at least the approaches of a time of scarcity. They are much better off than I, on a superficial view of their circumstances, or than their own fellow-residents of superior station, suppose them to be; and the only individuals among them who have no margin, or but the slenderest

margin, are their dependent relatives, the most numerous of whom are old widows and others disabled by sickness, age, or some bodily or mental infirmity."

† Area 2,621 sq. m. Population 1,041,752.

In Midnapur* District the first note of distress is struck, and, although the Bengal Government in its review states that symptoms of chronic poverty appear in Bankoorah† District, it can hardly be concluded from the Collector's report that the situation in Bankocrah is at all unfavourable. He writes : "the report that the situation in Bankocran is at an uniavourable. He writes the cultivators and other people including labourers are generally beyond the power of heartless money-lenders and live more comfortably off than their forefathers. Debts are incurred for marriages and other ceremonies. Agricultural labourers get on an average $2\frac{1}{2}$ annas a day, which is barely sufficient to meet their daily expenses; but there is no want of work for them. In Midnapur District, however, there is evidence furnished by the native Settlement Officer which suggests that the condition of the ryots in a part of the district is unsatisfactory. Land and cattle are both stated to be deteriorating—the former from impoverishment of the soil; the latter from want of fodder. The grazing grounds have disappeared before the weavers and other castes, who have now taken to agriculture for their subsistence. The ryots live from hand to mouth. Two full meals of coarse rice per day are a luxury to them. They cannot afford dâl and vegetables daily: salt is their ordinary condiment and kalmi (a kind of aquatic plant), and boiled brinjal form their daily vegetable diet. The increase of salt duty has been a great hardship to them. They think themselves fortunate when they get fish and dal at dinner: this they hardly do more than once a week. Their physique has deteriorated from insufficient food and constant attacks of malarious fever.

Great weight should be given in Bengal to the opinion of a Settle nent Officer, as he possesses means of acquiring information which the ordinary district officers do not enjoy, but it is to be noticed that the subdivisional officers of the Midnapur District are of opinion that all the people have a sufficiency of food. Moreover, with Calcutta near at hand, there need be no alarm for the agricultural classes of *Midnapur*, and, briefly stated, there is nothing in the circumstances of the divisions mentioned above which would justify any presumption that the people are generally in a condition requiring relief.

But on passing into the province of Behar, which includes the districts of Monghyr§ and Bhagulpur | as well as the Patna Division, ¶ the scene changes. Excluding Champarun** and Shahabad†† districts where land remains to be broken up, the Behar Province comprises seven districts, Patna, ‡‡ Gya, §§ Muzzofarpur, || || Durbhunga, ¶¶ Sarun, *** Bhagulpur and Monghyr, with a population of 15,313,359. Wages are low; the highest wage is 2 annas a day: employment is insufficient: rents are high and tenure is insecure.

The facts included in the following extracts apply generally to all the seven named districts of Behar:

The Settlement Officer, Mr. Collin, writing with special reference to two villages examined by him in the district, observes:—" From the foregoing description of the condition of the agricultural classes in this pergunnah (Daphor), it appears that they need not at present cause any apprehension, and that in ordinary years they have sufficient means of subsistence. The picture which I have drawn does not, however, show any great prosperity, and shows that the lower classes, which, including the weaving class, amounting to 25 per cent. of the population, have little chance of improving their position, and that they would have no resources to fall back upon in time of scarcity." The Collector of Monghyr remarks that he has come across many inhabitants who were thin and apparently in want of due nourishment. The Collector of Patna writes of ryots holding less than four local bighas, or two and a half acres:—"Their fare is of the very coarsest, consisting to a great extent of khesari ddl, and the quantity is insufficient during a considerable part of the year. They can only take one full meal instead of two. They are badly housed, and in the cold weather insufficiently clothed." As to labourers, he adds, that their condition is rather worse: "They are almost always paid in kind, the usual allowance of a grown man being 2 to 2½ seers of the coarsest and cheapest grain, value about 1½ annas. Women receive about half this rate, but their employment is less regular. Ordinarily, male labourers do not find employment for more than eight months of the year. The conclusion to be drawn is that, of the agricultural population, a large proportion, say 40 per cent., are insufficiently fed, to say nothing of clothing and housing. They have enough food to support life and to enable them to work, but they have to undergo long fasts, having for a considerable part of the year to satisfy themselves with one full meal in the day. With regard to Gya, the Commissioner accepts a statement made by the Collector that 40 per cent. of the

"In Behar, the districts of Mozufferpore and Sarun, and parts of Durbhunga and Chumparun, are the worst, and there is almost constant insufficiency of food among those who earn their living by daily labour."

The remarks of the Bengal Government on the measures which suggest themselves for relieving the pressure in Behar should be read. A survey and recordof-rights under the Bengal Tenancy Act, emigration and popular education, are all mentioned; but of these, emigration which is now rendered possible on a large scale by the annexation of Upper Burma, appears to be the most practical and expedient.

Sufficient has been quoted to show that in the seven districts of the Behar Province the struggle for existence is very severe; but a few statements made by the Collector of Bhagulpur and the Settlement Officer of the Banaili and Srinagar estate may be added. The former writes: "the mass of ryots are not under-fed, but the labourer is under-fed for about a fourth of the year. wage as quoted in cash is miserably low, and varies from five pice in the south and extreme north to six pice over most of the district. Cash payments are rare, and although the labourer benefits to a small degree by the rise of prices, viz., to the extent that his wage on grain exceeds his actual consumption thereof, the system of grain payment is a real danger to the population. For directly a crop shows signs of failing, the grain store is husbanded, and the labourers are under-fed. The weaver is the worst-fed man in the village community.

The Settlement Officer of the Srinagar estate gives interesting details as to the employment and food of labourers. Employment is forthcoming for six months in the year; for the remainder of the year it is fitful or entirely wanting. The villagers do not purchase oil except for rubbing on the head and body occasionally. It would be a luxury if they could get some oil to cook body occasionally. It would be a luxury if they could get some thus:—The their vegetables. The conclusions of this officer are summed up thus:—The working classes with or without small holdings are badly clothed, badly housed; do not enjoy any luxury of life; live from hand to mouth, but do not suffer from actual want of food in ordinary years.

The Chota Nagpur Division* covers an immense area and contains races whose Area 26,966 sq. m. Population 4,225,989. condition varies from little more than savagery to orderly and civilized communities. condition varies from little more than savagery to orderly and civilized communities.

The Inspector General of Jails remarks that the only parts of Bengal on which there need be anxiety regarding sufficiency of food, are Behar and Chota Nagpur. In Manbhoom† District it is stated that among the labouring classes there is a section, under one-fifth, which is well to do, but the majority have, to put up with a standard of living which is barely half as high as that common among the cultivators. In the Singhbhoom‡ District there are no indications of want, and in some parts there is distinct prosperity. In the Lohardugga District there is good evidence to show that two meals a day is the rule, and the number of cattle and utensils argues a comfortable state of things. Emigrathe number of cattle and utensils argues a comfortable state of things. tion and employment in the local tea gardens also assist to keep up the standard of living.

In the Hazaribagh || District there is no ground for anxiety, and the dis- Area 7,021 sq. m. trict reports justify the conclusion of the Commissioner that, though debt is rife and there are many poor people in the division whose livelihood, especially when there are partial failures of crops, is precarious, there is no doubt that the great majority are not ordinarily severely pressed. "The physique of different classes, castes, and tribes varies very much; but, generally speaking, it is good."

The reports for the Orissa Division are written by officers of whom many are new to the districts. As regards Pooree** District, however, there is the are new to the districts. As regards Pooree** District, however, there is the evidence of Mr. Taylor who possesses considerable experience, and he seems to think that the poorer classes are not under-fed. Even after three successive years' failure of the rice crop there was no sign of actual starvation or serious distress. Dr. Sandel, Civil Surgeon, however, is of opinion that the poorer classes, are not properly fed or clad. They barely subsist on coarse rice and a spinnage curry cooked without oil. As a rule, they do not have more than one meal a day.

In the Balasore* District Dr. Zorab, who has had 15 years' local experience, testifies to a prosperous state of affairs. The Deputy Collector who has 9 years' local experience says:—"As regards sufficiency of food I may say that if there be people in this district really suffering from a daily insufficiency of food, their number is not greater than what is to be always found even in prosperous countries under special circumstances."

On the whole, the evidence for the Orissa Division is of a reassuring tendency.

The foregoing extracts are on the whole satisfactory. The reports indicate the prevalence of indebtedness, but there is reason to believe that indebtedness, usually the result of expenditure on marriages and other ceremonies, is quite compatible with a fairly comfortable condition of life.

On this point, Mr. Boxwell, Officiating Commissioner of Patna, states :

"General indebtedness of a poor agricultural community is not like, and is much less bad than, the common indebtedness of an extravagant man. It means nothing more than that in the tight season—that is, the season of ploughing and sowing—the mahajan advances what he recovers with interest in the harvest. The strange notion that borrowing makes a permanent addition to a cultivator's income, and the common view that a peasantry in debt is on its way to rain, seem to be equally wrong and almost equally paradoxical. In a low state of civilization people are unable to do their own saving. Their mahajans do it for them, and make them pay well for it; but in an ordinary year the produce of the soil, including, of course, pasture and jungle, supports the cultivator, the labourer, the mahajan, and the landord."

Frequent mention is made of the depressed condition of certain classes of the artizans and weavers have undoubtedly been injured by the introduction of English goods. They are, however, taking to other employments. In conclusion, the following quotation which gives a summary of facts and inferences made by the Bengal Government furnishes a fair picture of the situation:

"The general result of the enquiry is that, in the greater part of the Lower Provinces, the industrious classes find no difficulty in supplying their primary wants, and are, as a rule, well nourished. Their prosperity is greatest in the eastern districts, and gradually diminishes as we carry the survey towards the west. It is not impaired by endemic disease, even where this has reduced the population, and left the survivors to some extent emaciated or enfeebled. On the contrary, the reports from districts so afflicted show that the inhabitants are somewhat better off than in the neighbouring tracts. But the signs indicating prosperity cease when we reach Behar, where, though the cultivators having holdings of a size sufficient to afford full occupation to their families are well-to-do, and the middle class enjoys exceptional comfort, wages are very low, so that those who depend for their living entirely or mainly on their daily labour, earn a very scanty subsistence. The number of these labourers, including those who hold some land, is estimated at about forty per cent. of a population of over fifteen millions. The cause of the lowness of wages appears to be the multiplication of the labourers in a which employment can be found on the lowest terms consistent with the continu d maintenance of families. This cause is of a permanent nature, existing social and climatic conditions remaining unchanged. Its effects would not be counteracted by any conceivable development of local industry, as such development could hardly progress in geometric ratio with the increase of population. Emigration can afford a sufficient and lasting remedy, only if it be conducted on a large scale and continuously. If, after a system of emigration had been established, its operations were to be checked by the occupation of lands now waste, the existing difficulty would arise again. It is possible that popular education, which has hardly as yet touched this part of the population, might, in the course of many years, effect a permanent chan "The general result of the enquiry is that, in the greater part of the Lower Provinces, the

Assam.

In Assam the enquiry was conducted in the most important part of the Province, viz., the five upper districts of the Brahmaputra Valley and in Sylhet.

† Ares 21,414 sq. m. Population 2,249,185

The Brahmaputra Valley. +- The main food of the people is everywhere rice, of which there are three principal kinds, viz., Sali or transplanted winter rice, and bao or broad-cast winter rice, and ahu or early rice. Various pulses are also grown, and certain species of vegetables are cultivated in almost every household, and others found wild everywhere are very universally used. Scarcely

a meal is taken in which some one or more of them does not form an indispensable adjunct to the staple commodity, rice. The use of ghi is almost unknown in the Province. The ryots enjoy several advantages such as are not possessed by the inhabitants of most other parts of India. One of the most important of these is free-grazing for their cattle. No charge of any kind is made for grazing except in a part of the Lakhimpur District. Building materials are also obtained free of all charge: each ryot's household being allowed annually for its own use gratis the following articles:—bamboos 400 and came 10 bundles; thatching grass can be had for the labour of cutting and carriage. Another advantage enjoyed by the Assamese consists in the amount of food that grows wild, while firewood also is practically unlimited. Each ryot's household is also allowed gratis four unreserved trees annually for its own use, and almost all the implements they require for household or agricultural purposes are made from wood, which is procurable almost everywhere. Another of the causes which allow the Assam cultivator to lead an easy life, are the facilities for taking up and abandoning lands which are perhaps greater than in any other part of India. The collateral sources of income possessed by the Assamese are numerous. The Hindus and Mohamedans use and sell milk; others engage in sericulture: the silk of the Eri worm sells at Rs. 5 per seer, the cocoons of the Muga worm sell at Rs. 2 per 1,000, and the thread costs Rs. 10

Labour for tea-gardens is largely met from local sources, and the pay that an Assamese coolie can earn on a tea-garden, varies from Rs. 7 to Rs. 10; while work on roads generally gives a laborer 4 annas a day, or Rs. 7-8-0 a month. Rubber-cutting, another source of income, yields a rate per maund, varying from Rs. 30 to Rs. 50. Large quantities of thatching grass are also brought for sale to the more important stations during the cold weather, and sold at prices varying slightly above and below Rs. 5 per 1,000 bundles.

Breeding livestock, such as ducks, goats and pigeons is an almost universal practice; while many cultivators also supplement their income by catching and selling fish, and others supplement their ordinary meals by shooting or snaring game. Weaving, growing lac, turning cane mills, and collecting whelk shells—from which a lime which is largely eaten is made—make up the other sources of income of the ryot.

In Sylhet* as in the Brahmaputra Valley the staple food is rice, of which *Area 5,440 mg. m. The ordinary economic condition of the people is not so good as it was a few years ago; their wealth consists of land and cattle principally. The great object of every man is to own his homestead cattle principally. and piece of land.

There is no such class of people who solely depend upon their earnings as hired labourers. The land revenue in Sylhet is lighter than in the Assam Valley and the district produces more rice than is needed for its own consumption.

The conclusion drawn from the evidence, taken as a whole, seems to be that while the peasantry in the district are well above anything approaching distress, their condition cannot at this moment be said to be prosperous.

In the hills the people are everywhere comfortable, muscular and well nourished (as non-Hindus, they eat freely of meat), and ready and able to earn good wages by labour.

The general conclusion arrived at for the whole Province is that the question raised by the Government of India, need cause no anxiety whatever.

North-Western Provinces and Oudh.

In these Provinces the enquiry was made after a succession of bad seasons, when the gravest anxiety for the present, and apprehension for the future existed. In these circumstances it might have been expected that the result of the enquiry would have been far from re-assuring, but the North-Western Provinces and Oudh Government consider that the consensus of opinion is to the effect that the people are not generally underfed.

ea 2,379 sq. m. pulation 1,313,137.

The Commissioner of Meerut* thinks that cultivators have the means of supplying all their actual wants, but that labourers may be occasionally hard pressed.

a 1,453 sq. m. oulation 671,690.

Area 1,739 sq. m. Population 756,528.

Mr. Cadell, Collector of Muttra, + believes that the agriculturists, even after the failure of the kharif harvest, were able to hold their own; but he admits that the condition of labourers was worse, and that they had been severely tried by the past cold weather. Mr. Crooke, Collector of Etah, those peculiar knowledge of agricultural life lends a great value to his remarks, considers the peasantry to be a robust, apparently well fed population and dressed in a manner which quite comes up to their traditional ideas of comfort. In spite of the abnormally high prices of food-grains, there has been no sudden increase of offences against property, nor did the number of beggars seem unusually great. Mr. Crooke does not believe that anything like a large percentage of the people in Elah, or in any other district of the Provinces is habitually under-fed. There are times, of course, when the small cultivator and field labourer do suffer privation; but this is a very different thing from habitual privation. Indebtedness is prevalent, but the fact seems to be that with the agricultural classes a normal state of indebtedness is quite consistent with the possibility of passing a life of comparative comfort.

Mr. Crooke observes that the sanitary evils, under which the agricultural population suffer, in particular the prevalence of malaria due to canal irrigation when unrelieved by drainage are severe, and in many cases render the agriculturists unfit to consume the varieties of grain, which are their usual food. In many villages the interruption to work produced by malaria is very serious. Mr. Alexander, Collector of Etawah, § saw a good many people in March last, whose appearance showed that they had been suffering from an insufficiency of food; but writing in May, he says that none except actual paupers are in real distress.

After a careful enquiry Mr. Alexander is of opinion that the bulk of the cultivators in the villages, selected for investigation, have not been suffering from want of food, and do not ordinarily do so; but that owing to high prices the labourers and a few of the smaller or exceptionally unfortunate cultivators have been pressed between December 1887 and March 1888. Mr. Porter, Collector of Sháhjahánpur, || writes:—"The poorer classes eat only the coarsest and cheapest grains and can eke out a subsistence as long as these are

procurable, at not less than 14 seers to the rupee."

Mr. Holderness, writing of the *Pilibhit* District, says "that the landless labourer's condition is not all that could be desired. The united earnings of a man, his wife, and two children cannot be put at more than Rs. 3 per month. When prices of food-grains are moderate, work regular, and the health of the household good, this income will enable the family to have one good meal a day, to keep a thatched roof over their head, to buy cheap cotton clothing, and occasionally a thin blanket. The small cultivator is slightly better off, but he has not always enough to eat, or sufficiently warm clothes.

The Commissioner of Allahabad** remarks in a general way that there is very little between the poorer classes of the people and semi-starvation; and the Collector of Banda++ writes that a very large number of the lower classes of the population clearly demonstrate by their poor physique that either they are habitually half-starved, or have been in their early years exposed to the trials and severities of a famine. It may be observed that the districts of the Allahabad Division are peculiarly subject to a very precarious rainfall.

Mr. Bird, writing of the Cawnpore the District, considers that the cultivators do fairly well in ordinary years, and that labourers can obtain constant employment.

Mr. Rose, Collector of Ghazipur, §§ has gone very thoroughly into the question. He is of opinion that no class of the agricultural community suffers from a daily insufficiency of food, but admits that a few weavers here and there know what it is to want a meal. On the whole, the daily supply of food may be of coarse quality, yet the quantity is sufficient, as a rule, to maintain health and strength; luxuries of any kind are unknown, and the clothing is not sufficient protection against the severity of the cold weather.

The information from Jhansi | | is meagre. The Commissioner thinks that the scantiness of the population precludes the idea of starvation, and he

notices that labour is always in demand. The Deputy Collector of Kalpi, a native, is emphatic in denying the insufficiency of food.

The following accounts are given in respect to Oudh:

Mr. Boys, Commissioner of Sitapur,* appeals to the evidence of his own Area 2,215 sq. m. Population 958,251. The cultivators in Oudh are far better off than they were 25 years ago.

They are in better condition; they have more household effects, and of a better kind in shape of cooking vessels and utensils of kinds: "they are happy and contented."

Mr. Harrington, Commissioner, Fyzabad, thinks otherwise. He quotes Area 1,088 eq. m. articles from the Gazetteer and articles of his own, and maintains that the assertion that the greater proportion of the population of India suffer from a daily insufficiency of food is "perfectly true as regards a varying but always considerable proportion of the population, for a considerable part of the year in the greater part of India." Mr. Harrington's experience, however, extends only to his own Province, in respect even to which his broad assertion must be qualified by other evidence.

In Gonda‡ District the Deputy Commissioner states that the poorer or even *Area 2,881 sq. m. Population 1,270,926 the poorest agriculturists or labourers do not suffer from insufficiency of food.

Mr. Irwin, Deputy Commissioner of Rae Bareli, § is like Mr. Harrington, § Area 1,729 sq. m. regarded by his own Government as a pessimist, and his opinions expressed in his "Garden of India" certainly favoured the impression that there was a widespread want of food. He now takes a more cheerful view of the situation: "the mass of the agricultural population in ordinary times and the *èlite* always do get enough to eat: a considerable minority in bad seasons feel the pinch of hunger, and a small minority, consisting of the sickly, the weak, the old, and the childless suffer from chronic hunger except just about harvest time when grain is plentiful." Mr. Irwin incidentally notices the decreasing productiveness of the soil and the gradual deterioration of the country cattle. He advocates the stopping of the exportation of grain from India when prices in any large portion of the country reach a certain point. Recent experience, however, proves that a high price in India does, as a matter of fact, in itself act as a powerful and speedy check to exportation.

The opinions, thus submitted for the North-Western Provinces and Oudh based in many cases on careful observation, illustrated by typical instances, and formed at a time when there was considerable anxiety on account of bad harvests, are, on the whole, sufficiently favourable to justify a general negative to the enquiry put by the Government of India. Even the artizan class live in comparative comfort.

Sir Auckland Colvin disclaims optimist views, and points out that when an officer speaks of the more indigent class of the people, as being always on the verge of starvation, the meaning is not that they are living on insufficient food, but that they run the risk in view of a failure of the rains of losing employment, and consequently losing the means of obtaining food.

The remedies proposed are of the usual type: Extension of communications by railway or road; irrigation; land laws; introduction of industries other than agriculture; and, above all, facilities for the migration of surplus population. In the matter of migration the cost of transport must be faced, and Government must be willing to forego the land revenue for, probably, not less than one generation in the tracts opened to immigration.

Punjab.

There are no grounds whatever for any anxiety as to the condition of the Agricultural population in the *Punjab* of food. The evidence given is of a very decided character. So long as men and women of the lowest classes, marry young and have families, borrow money for expenditure which is unnecessary, and are content with a low standard of living so long will periodical suffering occur, but the masses in normal seasons get as much to eat as they want.

Area 5,610 sq.m. opulation 1,907,981.

In the Delhi* Division which contains tracts of land which are distinctly insecure, a systematic enquiry was set on foot. There appears to be no actual want of food, but the standard of living is perilously low. Green crops, herbs and even berries, are consumed in quantities larger than is good for health, but the officers of the Delli Division consider that it but the officers of the Delhi Division consider that it is erroneous and misleading to say that any considerable portion of the population of the Punjab, whether urban or rural, suffer habitually from any degree of hunger. They admit that there is an unsatisfactory mass of low diet in the country even in normal conditions, but they maintain that there is no evidence to show that poor feeding is on the increase. On the contrary, they believe that the standard of general comfort is higher now than before annexation, and doubt whether the moor of India are normally worse off as records feed then in vectors countries. poor of India are normally worse off as regards food than in western countries. This opinion is of value inasmuch as the officers who give it are all men of experience and habits of observation and if the assertion now under discussion were true in any part of the *Punjab*, it would be in the districts of the *Delhi* Division.

Area 8,987 sq. m. Population 2,191,517.

The rest of the province may be dealt with very briefly. In the Lahore† Division the two pounds of flour ration eked out by pulse vegetables and condiments, is available to the vast majority. The diet is plentiful and of as good a quality as the peasantry care for.

2 Area 12,571 sq. m. Population 2,421,781.

In the Jullundur; Division it is untrue to say that the greater part of the population suffer from an insufficiency of food. Rai Maya Dass, Extra-Assistant Commissioner, speaking of 33 exceptional villages in the Ferozepore District, says that many of the people lie down hungry in the evening and seldom get. sufficient for both meals during the 24 hours.

§ Area 2,752 sq. m. Population 650,519.

In Multan District there is no distress. The Commissioner of the Rawal Pindi Division remarks, that the Natives of India undoubtedly suffer less from deficiency of food than in Great Britain, Canada, or British Possessions

in northern latitudes. In Shahpur,** where the recent harvests have been bad, the Deputy Commissioner writes, that it is not the case that any considerable proportion of the people suffer from a normal insufficiency of daily food. He appeals to the low death-rate and the high birth rate. The proportion of the starving poor is not excessive, and their existence may be traced to the following causes:-

Area 4,691 sq. m. Population 421,508.

- 1. Want of thrift.
- Low standard of living.
 Too rapid increase of population.
- 4. Rise in prices.

Ghulam Farid Khan, Extra-Assistant Commissioner, Shahpur District, holds that ½ per cent. of the Hindus live at starvation point, and that 10 per cent. have an insufficient quantity of food, while 4 per cent. of the Muhammadans are at starvation point and 20 per cent. do not obtain sufficient food.

th Area 17,681 sq. m. Population 1,137,572.

The Commissioner of the Derajat++ Division scouts the idea that in ordinary times there is an in sufficiency of food, and the Deputy Commissioners of the Division support this view. In Dera Ghazi Khan§§ District, generally speaking,

Area 9,296 sq. m. spulation 441,649,

¶¶ Area 8,381 sq. m. Population 1,181,289.

all classes appear to be well fed. In one insecure tract of the Dera Ismail Khan District, now deserted by the people, the inhabitants were reduced to the unwholesome berries of bushes and trees, but elsewhere the people have as much

as they can eat.

In the Peshawar T Division there is no class of the population in want.

Briefly it may be said that in the Punjab, in ordinary times, the greater proportion of the population does not suffer from a daily insufficiency of food; but in times of unusual scarcity, not amounting to famine and high prices, the poorer classes, whose standard of living is very low, are no doubt reduced to great straits, and do not get a sufficiency of food.

Sir James Lyall points to the physique of the people, to the high birth-rate and low death-rate and to the rise in wages, and says that the remedy for congestion, when it occurs, lies in the construction of new canals.

Rajputana.

In Rajputana* the population do not suffer from a daily insufficiency of food. Whenever there is any distress the Durbars make advances, which keep the people going until the crops ripen. In late years there has been a greater tendency to store fodder and the staple food of the masses, collected in years of plenty, to be expended when hard times come, than used to be the case.

Area 2,710 sq. m.

As regards Ajmere-Merwara+ the Commissioner says that he has been specially struck by the generally hardy physique of the agriculturist, and has heard nothing about what is understood as insufficiency of food. There are few families in which he says there is only one bread-winner; the women and children earn something. The Judicial Assistant Commissioner remarks that the fact that the agricultural classes and village menials are seldom seen flocking at cities to partake of the charities bestowed by wealthy citizens is self-evident proof of their capability to feed themselves without relief from abroad.

Bombay.

The evidence collected in the Bombay Presidency and Sind is of a very interesting character, and furnishes, so far as that Presidency is concerned, a complete contradiction to the alleged insufficiency of food. There is a peculiar line of demarcation between the upper and lower strata of the population, and the lower is known as the Káliparraj, or dark folk, and it is in this lower stratum that classes are found who live below the standard of 2 pounds of grain per man. But it appears from the reports that the early tribes who constitute the division known as the Káliparraj substitute for the ordinary Bombay ration, which consists of millets and occasionally rice and wheat helped with pulse and condiments, such food as mowra flowers and jungle products; and that, in spite of the presumably inferior quality of this diet, they are extraordinarily healthy.

Gujarat; is the richest division of Bombay. The dark-folk form 53 per cent. \$\preceq\$ Area 10.158 sq. m. Fopulation 2,857,741. of the total population, and they all drink. The standard of living has changed but slightly within the last 15 years, and many of the early tribes live during the hot weather more or less on roots, and mowra-flowers, are miserably clothed and housed, and degraded by drink.

But it is explained that a diet of forest products does not necessarily imply an insufficiency of food, and it must be remembered that with the early tribes these products are articles of normal diet.

The causes of indigence among these classes are drink, dislike of steady The danger of a too great extension of Forests is also noticed in the Decean-Karnáták.

Work, and to some extent the restraint imposed upon them by the "Forcet and The danger of a too great extension of Forests imposed upon them by the "Forest and Excise laws." "The high prices at which liquor is sold have added a great deal to their wretched condition. The hard struggle to obtain the usual quantity of drink, even at the sacrifice of other necessities, has thrown them completely into the clutches of the local money-lenders and liquor-sellers."

The middle classes are saving, or, at any rate, are earning more and live in greater comfort. Many things formerly accounted luxuries have become necessaries. The masses do not save, and live from hand to mouth; but, on the

whole, poverty is not on the increase.

In the Deccan § 33 per cent. of the area with a population of 1,727,250, § Area 37,407 sq. m.
Population 5,315,123. rivers, but has excellent communications by road and rail. The population is sparse, only 148 per square mile, and the lower stratum is only 23 per cent. of the total population. Employment is constant, and it is considered that there is no widespread distress anywhere in the Deccan.

The Commissioner of the Deccan remarks at the end of a graphic letter :-

The observant among us who have passed the best part of our lives in the country, who are in sympathy with the people knowing their language, respecting them for their decility and patience and their wonderful charity to each other, we who have watched all this come to pass, and have marked this steady advance, do not assert that our agricultural and labouring classes are prosperous. We know that they are poor, in the sense that they have few possessions, and those mostly their carts and bullocks and ordinary necessaries. We know that they have little money. We know that they habitually live from hand to month; but we also know

that they are not in any sense poverty-stricken, that there is no widespread distress among them, and that they have no difficulty in "filling their bellies" every day. We know that their earnings and resources have increased and with them the standard of their living.

The Karnáták or Southern Marátha country comprises the districts of Belgaum,* Dhárwar† and Bijapur; † 61 per cent. of its area is chronically liable to famine.

Mr. Trimalrao Vyankatish estimates that 5 per cent. of the *Dharwar* population is insufficiently fed, and there is supposed to be some want in the Ghat villages of *Relgaum*. The Commissioner, Mr. Propert, however, knows of no class who endure absolute want, though he estimates that poverty is universal.

"Poverty" amongst the labouring classes of the mofussil most certainly exists, and not only does it exist, but represents the normal condition of those classes. Their houses are poor, their belongings are poor, their food is poor, their clothing nery poor. "Poverty,' however, and "want," at any rate in India, are two very different things, and after many years' residence amongst the people of the country, I have no hesitation in saying that while poverty" is the rule (I still speak of the lower classes), actual "want" is the exception.

The Konkan includes the districts of Thana, \$\\$Kolaba, \|\|\ \and Ratnagiri, \|\|\ \and \text{andra***} has also been discussed under this Division. Ratnagiri is the only district about which there need be anxiety. It has a dense population and a severe landlord system known as the Khoti tenure under which a rent is exigible, by the khot amounting to from one-third to one-half the gross produce. The reports on Ratnagiri are despondent. The Ghat cultivators for the most part cannot get enough to allay hunger in the hot weather. Mr. Rand says one-fifth cannot, and according to Mr. Candy one-fourth cannot. Mr. Crawford, who before the Famine Commissioners said "there was not a single monsoon, however favourable, in which the people do not suffer without a murmur most of the hardships incidental to a famine" now maintains that the development of the country has been so great, that there are very few isolated or inaccessible spots in the whole Southern Konkan where chronic distress exists. Families resort to the Bombay labour market, and 9,000 Konkanis are annually employed in the Army. On the whole, in spite of the above assertion, it is to be feared that in Ratnagiri District there is distress. Near the Ghats the people subsist largely on roots and wild vegetables, mango and jack fruits. They do not save, and seldom have an ornament of any kind; and 90 per cent, of them are in debt.

In Sind†† the people are in easy circumstances, and in the absence of war or special calamity, the fear of general pauperism or acute distress will be far removed. The Sindi's diet is more generous than that of any other people in India. He consumes 3 pounds of grain, whereas the ordinary ration elsewhere is 2 pounds. Meat is not unusual; curds, milk, fish, and even ghi are common. Pulse and vegetables, and condiments are almost invariable. Millets are the staple grains, but wheat and rice are also eaten. The Sindi drinks a decoction of bhang, but his drink does not cost him more than 3 to 5 rupees a year. His clothing is ample, costing perhaps 5 to 6 rupees a year.

With the exception of the Ratnagiri District, it may be said that the people of the Bombay Presidency are in fairly good circumstances. Even in the famine only 10 or at the outside 15 per cent. of the population showed the effects of pressure by death or resort to relief, and in the scarcity of 1885, relief works were scorned in Bijapur. One anna per head all told, or 2 annas a day for an adult man, is sufficient to provide food, and this wage can be earned everywhere.

The Bombay reports are concluded by the summary prepared under the orders of the Governor:

The causes of indigence and the localities in which it is to be found, are well known. The early tribesman with his drink and indolence, the Deccan Kunbi with his uncertain seasons and danger of famine, the Kenkani with his rugged country, poor soil and swarming population—the existence and poverty of all these is recognized and felt for. Gigantic efforts have been made, in many points crowned with success, to deal with their cases. In Gujarat we see the Kolis, in Thana the Thakurs, in Khandesh the Bhils, settling to cultivation. In the Deccan, railways and great irrigation works and special legislation for debt have been called in to give relief. The worst part of the Konkan has been explored by roads, and the enterprise of steamer companies has been attracted there. The post offices have enabled surplus earnings to be remitted with increasing ease and facility and in annually multiplying amounts. The result is seen in more emigration, in cheaper clothing, higher wages, an evener distribution of

§ Area 4,243 sq. m. Population 908,548, 1 Area 1,496 sq. m. Population 3s1,649. 7 Area 3,922 sq. m. Population 907,000

wealth among all including the lowest classes, and the gradual but sure diminution of distress and its localization to the least civilized and accessible tracts of the Presidency. Every Indian administrator has recognized the poverty of the people of India. A man who supports life in the Bombay Presidency on 2 or 3 annas a day will be poor, but not so poor by half is the man who is called on to do so in England, on a shilling, or what was once eight annas.

Central Provinces.

The enquiry in the Central Provinces has resulted in the collection of a mass of information of considerable value and interest.

In Saugor* investigations of a general character conducted by the Deputy . Area 4,005 sq. m. Population 504,956. Commissioner (Colonel Repton), convinced him that the average net income of a tenant was about Rs. 70, and that the smallest sum on which a family could subsist for a year was Rs. 36, when ordinary food had to be supplemented for some months of the year by wild fruits, berries and roots. Speaking generally he seems to have found amongst the tenantry a great deal of indebtedness, but no poverty to speak of.

In Damoht a considerable number of the smaller tenants seem to be hard + Area 2,700 sq. m. Population 312,057. pressed, though the Deputy Commissioner makes no mention of any cases of There is a serious amount of indebtedness in this district. The Deputy Commissioner admits that "the greater part of the insolvency in the district seemed to arise from causes under the people's own control," that "few instances of harsh treatment" were found, and that the people seemed "quite cheerful owing Rs. 1,100 or Rs. 1,200."

In Jabalpur; a very large proportion of the tenants was involved to greater; Area 3,019 sq. m. Population 657,233. or less extent in debt, but the excellent crop of the last season has enabled a large portion to pay off their creditors. The labouring class was found in enjoyment of little beyond a bare subsistence, but it was exceedingly difficult to get anything like reliable information from them. Village servants and entirgues were better off. artizans were better off.

In Mandla § 60 per cent. of the population is aboriginal. The Deputy § Area 4,710 sq. m. Population 301,706. Commissioner (Colonel Brooke) enquired into the circumstances of 17 families. Eleven held land, and the enquiries brought out that they were by no means as necessitous as they appeared to be. The Settlement Officer enquired into the condition of 119 families: 97 held land, and only 6 of these appeared to be in condition of 113 families. It field fand, and only or hardest were the Basras actual distress. The people whose circumstances were hardest were the Basras (basket-makers), but their poverty seems due in some measure to the habit of mádák smoking. Five families spent annually among them Rs. 3 in liquor and Rs. 42 in mádák.

The aboriginal tribes contribute a large proportion to the population of the Seoni | District. No general distress exists in this district, and the Commissioner Area 3,247 eq. m. Population 334,733. (Mr. J. W. Neill) is of opinion "that even the poorer amongst them manage in ordinary times, and even in time of short harvest to maintain an existence which contents themselves and which results in an ever-increasing population."

In Narsinghpur the general result of the enquiry was that cultivating Area 1,016 sq. m. Population 305,173. classes were comfortably off, with a sufficiency of food and clothing. They were, however, in debt to a very serious extent, a fact ascribed by the Deputy Commissioner "to the facility they enjoy for raising money on their land, which has operated as a temptation to extravagance;" and he mentions in support of this a foot discovered by the Count of Wards Manager that towards in the points. this a fact discovered by the Court of Wards Manager that tenants in the neighbourhood of towns, where money is plentiful and temptations comparatively numerous, are more indebted than those of outlying villages. The circumstances of village servants and artizans were found to be comfortable according to these of village servants and artizans were found to be comfortable according to these people's notions of living. A considerable portion of the blacksmiths, brassmakers and bangle makers, as a rule, had coolies in their employ to whom they paid from 2 to 3 annas a day. The field labourers were not found to be stinted in food, and all received their two meals a day. As regards the hill tribes the Deputy Commissioner writes that, in the famine of 1868-69, "the hill tribes were happy and flourishing while their brethren, in the plains were famishing, because when their crops failed the jungles yielded them food."

* Area 4,437 sq. m. Population 488,787. In Hoshangabad* the only classes amongst which there is any chronic distress are the hill tribes, the Gonds, Kurkus and Bhils; but there are hopeful signs that the Gonds and Kurkus are settling down to cultivation. The enquiry as regards the tenants, indicate a high standard of comfort; while the village servants and artizans are stated to be by no means impoverished, and the condition of the labouring classes appears to be distinctly better than in the preceding districts.

† Area 3,340 sq. m. Population 231,341. As regards Nimá + the Deputy Commissioner (Mr. Ismay) is of opinion that in the open parts of the district there is no poverty among the agricultural classes, though there is a very great amount of indebtedness, due very largely to extravagance. The artizans and village servants are fairly well off, while the labouring classes in villages, the open parts of the district, appear to be rather better off than in many other parts of the Provinces.

2 Area 3,905 sq. m. Population 304,905. In Betul[‡] the tenants are fairly off, and they are well supplied with cattle. Indebtedness is however very great. Village servants and artizans are reported to live very comfortably, while field labourers in regular service receive from 10 to 20 maunds of grain and Rs. 12 or 15 in cash. Their wives earn something in addition to this, and they can generally make both ends meet.

§ Area 3,915 sq. m. Population 372,899. In Chindwara \(\) the tenants are much involved owing to extravagant expenditure on marriages and other festivals. Artizans and village servants, on the other hand, are said to be doing well; while the condition of the labouring classes has improved, work is more plentiful, and even women and children have no difficulty in finding regular or occasional employment.

Area 2,401 sq. m. Population 387,221. For Wardha| the report has been submitted by Mr. G. Geffert, the Manager of the Hinghanghat Cotton Mills, who has had much experience of the conditions of life amongst the labouring classes:—He writes, that "artizans are, as a rule, well-to-do prople who can earn good wages and have money." The common cooly day-labourer earns 3 annas a day and want work for less; but on an all-round average his daily wages in money value come to about 2 annas for ordinary field work, $3\frac{1}{2}$ annas for juari cutting and 4 to 5 annas a day according to the market price at the time for these staples. His family earns another $\frac{1}{2}$ to $1\frac{1}{2}$ annas per day, for six months in the year. Their ordinary food is juari cake, Linseed oil, salt and chillies, and each adult's cost of living per annum amounts to Rs. 25 and clothing Rs. 5: total Rs. 30. The commonest labourer in the Mills commands Rs. 6 per month, and the lowest wages of a woman learning the work is Rs. $3\frac{1}{2}$ per month, which is subsequently increased to as much as Rs. 6 to Rs. 8 per mensem.

¶ Area 3,766 sq. m. Population 697,356. In Nagpur, though there is a good deal of indebtedness amongst the very tenants, there is very little poverty and the people bear their embarassments very lightly. The Extra-Assistant Commissioner writes:—"Had I been on other duty than that of specially enquiring into the condition of the poor, I should certainly have declared that there was nothing like poverty arising from indebtedness. The people looked happy and contented. Their food was that of men in ordinarily good circumstances." Again, of the condition of the laborers and artizans he says, "there is neither widespread poverty nor distress of a chronic character."

Area 10,785 sq. m.

In Chanda,** the labouring class seemed tolerably well to do, while the village artizans appeared fairly well off. Enquiries into the condition of farm well-to-do tenants showed that their net expenditure was from Rs. 150 to Rs. 250 a year, a large portion of which went in marriage and festival expenses.

†† Area 3,922 sq. m. Population 683,779 As regards the Bhandara++ District the opinion of the Deputy Commissioner (Mr. Tawney) is that the condition of the cultivator has greatly improved within recent years. He does not attach much importance to indebtedness as an indication of poverty. He instances the case of a Teli cultivator paying a rent of Rs. 17-8, and with an income of Rs. 132, who was in debt to the amount of Rs. 100 owing to marriage expenditure, and was found to have Rs. 150 out at interest! The labouring classes have a sufficiency of daily food, if they care to work for it. Mr. Tawney shows that "the ordinary cost of food for a man, his wife, and one child is $7\frac{1}{2}$ pice a day, and that if broken rice (Kanki) be substituted for rice, the cost can be reduced to $4\frac{1}{2}$ pice a day. This sum will

provide the family with $2\frac{1}{2}$ lbs. of grain and a small quantity of pulse, leaving $1\frac{1}{2}$ pice over for salt, vegetables, and firewood. It may be observed here that living in rice districts is cheaper than in districts the staple crop of which living in rice districts is cheaper than in districts the staple crop of which is wheat or juari, in that a considerable portion of the rice crop is broken up in the process of husking, and the broken rice, which is sold very cheaply as being useless for the market, provides the poor with the means of sustaining life at an almost nominal cost." A notable feature in this district is the large number of people who annually migrate to the Berars at harvest time, subsequently returning home with their surplus earnings. Mr. Tawney understands from the people who have returned that "a woman's wages there are about equal to a man's here and that the family can manage to save some money in consequence." here, and that the family can manage to save some money in consequence.

Writing of the Balaghat* District, the Deputy Commissioner (Mr. Nedham) Area 3,146 sq. m. Population 340,554 says, that "it may be safely said that there is no widespread poverty amounting to distress of a chronic character affecting a special class of the population or any particular part of this district, and I may add the opinion that all these classes have in ordinary years and apart from abnormal extravagances an adequate livelihood for the support of themselves and their families." The most instructive fact brought out by the enquiries into the conditions of the labourer class, was the extraordinary cheapness of a bare subsistence. "A Baiga basket maker, whose family consisted of himself, his wife, and two small children, made on a average 12 baskets a week, which he sold for 2 lbs of unlesked rice or small millet each. His monthly earnings were thus about 100 lbs of unhusked grain worth rather less than a rupee. The family not only managed to live on this, supplemented with jungle fruits and roots, but saved annually about a rupee's worth of grain, wherewith they purchased the scanty clothing which sufficed for them."

In Raipurt the people are better off than in any other part of the Area 11,885 sq. m. Province. Food is plentiful and living cheap; the people are, as a rule, well nourished and strong and healthy, able to perform their daily work in the fields with ease, and it is greatly doubted if their state of living would be much changed, were they far better off than they are now.

The Settlement Officer notes that "what strikes one is the remarkable equality of the economic condition of the tenant, the sole difference being that one man has a cow or a she buffalo, another has not."

The condition of village artizans are not less satisfactory than those of the tenants. They are remunerated in kind and hold in addition some land of their own. Of 42 field labourers whose state was investigated more than half, were comfortably off. No clearer indication of the easy condition of life in Chhattisgrah is needed than that afforded by the experience of 1886, when over a large proportion of the country the rice crop barely gave a quarter outturn. A scarcity was apprehended and relief works were started, but the people passed through the trial without assistance from Government, and the number of labourers who came to the relief works was quite inconsiderable.

In Bilaspur; cultivators are, as a rule, well off, and village artizans and Area 7,798 sq. in. servants have also found no reason to be discontented. The people of the Zamindaris to the north of the district are largely of an aboriginal race, and include a tribe known as the Dhanwars, who live by hunting, and are to all appearances the poorest of the poor. Yet it would be a mistake to consider their condition in any way distressed, according to their own ideas of life. The Deputy Commissioner writes of them that-

"The forest supplies them with bamboos, with which they make bows and arrows to hoot animals, and baskets with which they snare fish. They dispense almost entirely with clothes and all food-grains are regarded as delicacies. The failure of a harvest would deprive them of a weekly luxury, but would in no way threaten them with famine."

Writing of the cultivators in Sambalpur, § the Settlement Officer (Mr. § Area 4,621 sq. m. Nethersole) says, "physically they are in good condition, and I do not think Population 693,409. That their clothing is scanty, considering the local custom in this respect. In almost all villages but the poorest, a number of people may be seen wearing a small ring of gold in their ear or a silver bangle, and 'hawkers' find it worth their while to travel about with small mirrors, combs, boxes, beads and similar

cheap pieces of uselessness." Below the small tenant comes the field labourer, hired by the year. His condition is not unlike that of the small ryot, and there is a good deal of interchange between the classes, frugal, and industrious field labourers purchasing cattle and taking up land, while poverty-stricken ryots throw up their land and take to labour. The general conclusions Mr. Nethersole arrives at on the district are that "under normal conditions far more rice is produced than is required for the food of the population, and any one who chooses to work hard, has hitherto had little difficulty in maintaining himself and his family in relative comfort."

- * Area 13,062 sq. m.
- † Area 2,399 sq. m. Population 257,959
- 2 Area 540 sq. m.
- A report on the Chhattisgarh Feudatory States has also been furnished. The Political Agent (Mr. F. C. Berry) writing of the Bastar* State says, "that the aboriginals are hardy, active, and possess a physique which certainly does not indicate that they are habitually under-fed." In the Patnat State the condition of the agricultural population is reported by the Superintendent to be comfortable, while speaking generally of the lower classes in the Sarangarht State, the Superintendent says, "I should say that in average seasons they obtain an adequate subsistence, but in a season of deficient harvest they feel the pressure of high prices, which however, would rarely amount to actual want in the portions of the State where the forests are still abundant." "To sum up the facts given in the reports of these States as tested by my own experience," writes the Superintendent, "I should say that the majority of the population comprised in the lower classes subsists with ease under normal conditions, a large portion manages to subsist and to make both ends meet, while a small portion leads a hand-to-mouth existence, which in seasons of high prices passes from mere poverty into distress."

Mr. Mackenzie's general conclusion on the whole enquiry is that-

"there is no doubt in these Provinces a great deal of poverty, but there is very little distress. The people are well fed and the only section of them who can be said to be hard pressed for bare subsistence are the hill tribes, who are but little more provident than the beasts of the forests, and have to undergo similar vicissitudes in daily food. The volume of wealth is rapidly increasing, and there is no lack of employment for those who wish for it. If only more of the money which the Provinces are receiving reached the producers and less was intercepted by money-lenders and middle men, the condition of the people might be described as prosperous. But over them hangs the grip of the usurer and the shadow of the Civil Courts."

Berar.

In Berar real distress is practically unknown, and the laboring classes have attained a standard with which very few other parts of India can claim any comparison. They are generally well clad and in good ease, and at their frequent festivals show a good deal of wealth in their attire. Their food comprises—juari, toor dhall, chillies, salt, oil for cooking purposes, while they use kerosine oil for their lamps. Their marriages are conducted with the greatest prudence and economy and not allowed to trench on the year's supply. The Deputy Commissioner of Amraoti§ says, that there is no want of food in that district. The Deputy Commissioner of the Buldana District says that a fact which tends to prove that the agricultural laborer is well off is that during the season the watching of the crops and gathering of the harvest is principally performed by the pardashees who swarm, into the Province during the rains for the purpose. The Deputy Commissioner of the Basim District says that all who are willing can obtain employment and fair wages. The Vice-President of the Akola** Municipality remarks that no people in Berar suffer from insufficiency of food throughout the year, and a Native Deputy Educational Inspector bears testimony to the fact that the lower classes get full meals and all the necessaries of life, and points to the total absence of beggars in the Mofussil as another sign of the fair condition of the lower classes. A Native Extra-Assistant Commissioner and a Judge of the Small Cause Court at Amraoti, further attests that there is during times unaffected by famine, little dearth of ample food for the poorest in these tracts. He considers that the agricultural classes are particularly well off in all respects of bodily nourishment. Regarding the gipsy classes, they scarcely ever, the same official remarks, go without a daily meal, which with them is usually a substantial meat one provided by the game they capture.

§ Area 2,759 sq. m. Population 755,328. Il Area 2,804 sq. m. Population 439,763

Madras.

The Madras report is preliminary, and the enquiry will be continued. The opinions of the district officers are not supported by concrete instances, but in many cases they reflect the views of men who have for years observed the conditions of agricultural life in Madras. The conclusion of these officers, which is concurred in by the Board of Revenue and by the Madras Government, is, that no considerable proportion of the population suffer from a daily insufficiency of food in ordinary years.

In the Ganjam* district, though the income of agricultural labourers only * Area 3,106 sq. m. Population 1,003,301 just meets their expenditure, they have enough to eat.

‡ Area 6,525 sq. m. Population 1,780,613.

§ Area 8,471 sq. m. Population 1,548,480,

In Vizagapatam,† the Collector says, the agriculturists live miserably, and † Area 3,477 sq. m. Population 1,780,468, a cloth to cover himself, and a hut to live in, "the labourer is probably the poorest creature in the world." But, as pointed out by the Madras Government, the Collector admits that the inhabitants are poorest creature in the world." But, as pointed out by the Madras Government, the Collector admits that the inhabitants are an unusually sturdy and muscular class of men; and this is hardly compatible with a want of food. Further, it may be added that two or three meals a day is quite up to the average; that clothes in the Madras climate are a superfluity; and that the hut is the customary and traditional house of the peasant.

In Godavari; there is no deficiency of food among adults.

In Kistna prosperity is universal.

In Nellore | the Collector denies any insufficiency; but the Civil Surgeon Area 8,739 aq. m. Population 1,220,236, supports the insufficiency dictum, on the ground that criminals always increased in weight after they had been in jail some time, and that a large number did not get a feel to describe the description of the description o number did not get sufficient food to develop their muscles to their full extent. The Board of Revenue remarks that the Madras jail dietary is the most liberal in India, and that the hard labour of a prisoner in jail is by no means such hard work as that undergone by the labourer in the fields. This question of rise in weight during incarceration is one of some importance, and has been noticed in other Provinces. Mr. Crooke in the North-Western Provinces suggests that a newly admitted prisoner has just passed Western Provinces suggests that a newly admitted prisoner has just passed through the ordeal of arrest, and that he has probably been remanded more than once or marched about the country after a Magistrate in camp. A man like this naturally loses weight in the interval between arrest and conviction. Indian convict is not in solitary confinement: he is well dressed and lightly worked. If he is a cultivator, he is free from the labour and anxiety of field watching at night. He is promptly attended to for the most trifling ailments. Dr. Lethbridge, Inspector General of Jails, Bengal, also considers that the deep anxiety and often distress which precede conviction cause loss of weight. It may be added that a convict does not indulge in tobacco and opium.

Mr. Burditt, a missionary, says that the lower classes in Nellore do get enough to eat, and that they save money.

In Cuddapah, except from the 20th April to 20th June, every one gets Area 8,745 sq. m. Population 1,121,038. regularly more than enough; and even in the slack season there is little demand for work.

Great weight is attached by the Board and the Government to the opinion of Mr. Nicholson, Collector of Anantapur.** He says that the people are of a strong physique; that the birth rate is high; that in 1885 when relief works were opened few were attracted to them; and that the labouring classes, depleted as they were by the famine of 1876-78, always and everywhere in ordinary time find a sufficiency of the food to which they are accustomed.

Area 5,564 sq."m. Population 599,889,

In Bellary++ it is thought that the standard of comfort has risen.

†† Area 5,602 sq. m. Population 726,275.

In Kurnool* Mr. Benson, who is working at an analysis of the district, † Area 7,788 ag. m. says that there is no large class of persons pinched for food from year's end to year's end, and that there are few beggars or loafers.

Area 2,842 sq. m. Population 981,381,

In Chingleput* the Collector thinks the mass of the people live from hand to mouth, and in adverse seasons are seriously hampered. But the Government of Madras believes that the condition of the people has improved in a marked degree within the last ten years.

† Area 4,873 sq. m. Population 1,814,738.

In South Arcott employment is obtainable without difficulty at wages that give the labourer a sufficiency of food.

1 Area 3,654 sq. m. Population 2,130,383

In Tanjore; there is no sign of widespread poverty.

Area 3,561 sq. m. Population 1,215,033.

In Trichinopoly wages are high, food is cheap, and the appearance of the people is most prosperous.

Population 2,365,035.

In Malabar the people are stout, well-grown, well-nourished, and mus-"Children swarm and are as plump as partridges." cular.

Area 957 sq. m.

In the Nilgiris "" the proportion of the population who suffer from want of food is extremely small—as small as it is in any part of the British Empire."

** Area 5,381 sq. m. Population 3,699,747.

In Tinnevelly** the diet is sufficient to maintain a high degree of physical efficiency. The people are well-fed, and have a margin for superfluities, as is evidenced by the habitual use of ornaments by men and women of the common coolie caste.

tt Area 3,902 sq. m. Population 959,514.

In Canara†† the monsoon has never failed, and scarcity is unknown.

21 Area 7,256 sq. m. Population 1,817,814.

In North Arcottt the Collector in a burst of rhetoric suggests that grinding poverty is the widespread condition of the masses; and two missionaries state that many poor people, who though they do not actually starve, go through life on insufficient food.

In Madurass the labouring classes are very well off, and the condition of Area 8,401 sq. m. In Interior ayy the district is no doubt good, owing to the large amount of emigration to Ceylon and the Straits Settlements.

11 Area 7,842 sq. m. Population 1,657,690

In Coimbatore || || no one need starve who can or will work.

On the whole, it may be said that in ordinary seasons the lower agricultural classes generally get throughout the year a sufficiency of food, that is, food enough to maintain them in bodily health and strength and in full efficiency

Coorg.

97 Area 1,583 sq. m. Population 178,302.

In Coorg, II which is so favourably situated from a climatic point of view, there has not been that scope as in other Provinces for an enquiry of the kind indicated by the Government of India. In this Province there are no causes at work which tend directly to bring about a condition of widespread poverty or distress of a chronic character, and the condition of the ryots is, on the whole, one of advancing prosperity, which, in individual cases, can be frustrated only by thriftless and reckless habits among the people.

APPENDIX B.

Extract from a letter from the Director General of Statistics dated 26th March 1887.

Bengal.—The Lieutenant-Governorship of Bengal consists of a densely-crowded centre radiating off, except on the north-west, to a very thinly-peopled circumference. But while there is a steady increase of population in the outlying districts, the movement has generally been spontaneous, and in few cases have direct attempts at colonization proved successful. Thus, in the Darjeeling District on the northern frontier, at least two-thirds of the population are returned as immigrants, or the descendants of immigrants since 1835. "The whole district," writes the Deputy Commissioner, "is a single case of general reclamation"; but "no mass of immigrants moving in a body or at one time has migrated to the district." An effort, which the Deputy Commissioner made to start an immigration into the district failed, and he knows of no other such attempt. In the adjoining border district of the Western Duárs, a large influx of labour has also taken place. But this influx "has been purely spontaneous, so far as Government is concerned," and has been the natural result of the demant for labour at good wages on the tea plantations, and of the low rates of arable land. wages on the tea plantations, and of the low rates of arable land.

On the opposite or southern, border of Bengal, there has been a large influx of population into the Bankura District. But here again, the inflow has been gradual and spontaneous and

from the outer Santal country rather than from the central overcrowded districts. Since the Land Improvement Act of 1871, only Rs 9,386 have been advanced by Government for reclaiming lands. The work is usually conducted on a small scale, or by jungle leases from the zaminiars. The lessees excavate tanks and bring the land into cultivation, retaining about one-third of it rent-free, and paying a low progressive rate for the remainder.

In the South-West Frontier District of Bengal, Chittagong, and its Hill Tracts, reclamations are effected by a vagrant agricultural population, who move about in a region of spare land. It is reclamation by squatting, and their rights may be described a sort of tenure by land. It is reclamation by squatting, and their rights may be described a sort of tenure by trespass. In parts, the nomadic cultivation known as jum is still the most profitable. In other parts, such nomadic cultivation competes with regular tillage. But even in the settled localities, the cultivation still retains something of the migratory type. In many cases, the squatter will only pay for the area actually cultivated, and the intervening patches yield no rent.

On the other hand, in the Sundarban maritime tracts, reclamations have been to a large extent effected by capitalists. Apart from old historical cases of this class, considerable areas have been brought under cultivation of late years by zamindars and capitalists. Such tracts have been brought under cultivated by immigrant labourers who come for the season, and then are to a large extent cultivated by immigrant labourers who come for the season, and then depart with their wages. Many of the old cultivators as they grow rich extend their holdings by means of these immigrant labourers, or by under-tenants. Here also, as in Chittagong, reclamation by trespass and squatting is also common.

Two cases of reclamation by capitalists in inner Bengal have been prominently brought to notice—the Jagdispur Jungle and the Chanchal Estate. The Jagdispur Jungle belonged to the rebel Koer Singh, and consists of about 8,000 acres. It has been reclaimed and peopled to by Messrs. Burrows, Thompson and Mylne.

* * In 1559-50, there was not a single inhabitant in the tract. In 188', there were 8,597.

The Chanchal Estate in the Maldah District was cleared of jungle, and partly brought under cultivation by an able manager employed by the Court of Wards.

Broadly speaking, the settled Hindu agriculturists, even of the most thickly peopled of the Bengal Districts, do not move to outlying tracts. The pioneers of colonization in Bengal are the hill and forest races. These tribes send forth colonizers across the heart of Bengal are the hill and forest races. These tribes send forth colonizers across the heart of Bengal. But in some cases when they have cleared the jungle, and raised a few rough crops, they fail to become good permanent cultivators. Thus, in the Maldah District, they sell their clearings to become good permanent cultivators. Thus, in the Maldah District, they sell their clearings to Muhammudan husbandmen, and move on. The Santal is there the pioneer, and the Muhammadan cultivator enters into his labours.

THE NORTH-WESTERN PROVINCES.—Advancing up the Gangetic valley, the papers, taken together with the census, indicate that the middle river districts of the North-Western Protogether with the census, indicate that the middle river districts of the North-Western Protogether with the census, indicate that the middle river districts of the population here are vinces are already quite sufficiently inhabited. The movements of the population here are towards the Central Provinces and the south, and towards the outlying Outh and Sub-Himatowards the Central Provinces and the south, and towards the outlying Outh and Sub-Himatowards the Central Provinces and the south, and towards the outlying Outh and Sub-Himatowards the Central Provinces and the south, and towards the outlying of reclamation on a large But there are several remarkable and very interesting examples of reclamation on a large scale conducted by capitalists, European and Native among, which may be noticed five large estates aggregating 58,284 acres, and under reclamation by English capitalists. Within the district of Basti, indeed, the total number of considerable reclamation grants is 43, aggregating 90,152 acres.

The history of some of these reclamations is very instructive. The largest estate is the Birdpur grant, the property of Mr. Peppe, with a population of 23,688, living in 250 villages or hamlets, and running conterminous with the Nepal frontier for nine miles. Other reclamations by European capitalists have been effected in Partabgarh, Basti, and Gonda Districts. A large and important case of such reclamation by Captain Chapman, assisted by Government loans, and involving expensive irrigation works, deserves mention.

Captain Chapman's case leads by an easy transition to examples of reclamation by direct Government effort. A conspicuous example of this latter class in the North-Western Provinces is the reclamation of the Kumann Bhabar. This tract was a dense, almost waterless incest, the refuge of gangs of banditti. It was used as a grazing-ground during a short period of each year, but its deadly climate seemed to preclude any hope of settled cultivation. After various efforts, General Sir Henry Ramsay took the matter firmly in hand. He obtained an advance of Rs. 10,000 from Government, and was left unfettered in his management of the an advance of Rs. 10,000 from Government, and was left unfettered in his management, the Bhabar tract. The result is that after many vicissitudes and temporary disappointments, the Bhabar vators of the land, and about one-fourth seem to have settled permanently down—the census in vators of the land, and about one-fourth seem to have settled permanently down—the census in successful effort to reclaim forest is afforded by the Eastern Bhabar. But here, it is hoped that successful effort to reclaim forest is afforded by the Eastern Bhabar. But here, it is hoped that successful effort to reclaim forest is afforded by the climate yields to cultivation.

Grants of jungle tracts in the Saharanpur District have been brought under cultivation, partly by Europeau, partly by Native agency. The reclamations in the Gorakhvation, partly by Europeau, partly by Government to settle special classes of men on the pur District and the attempts made by Government to settle special classes of men on the land, are of considerable interest. The change which has been effected under steady British

The Punjab.—Proceeding still further up the river valleys, the problem of reclamation in the Punjab is, broadly speaking, a problem of irrigation. The movements of the people in this Province have been so admirably treated by Mr. Ibbetson in his Census Report, that it is unnecessary to do more than to refer to his volume. The detailed process of reclaiming and cultivating a large tract is clearly set forth in the Sirsá Settlement Report. The increase takes place both by the establishment of new villages, or the re-establishment of old ones, and by the growth of the existing villages, and the extension of the cultivated margin arround them. Much of the increase is due to the fact that large tracts of the Punjab were practically depopulated by invasion and rapine in the last century. In the Sirsá District, the returns show an increase from 35 villages in 1800 to 635 in 1881.

The manner in which the population follows the canals, or springs upon either side of them, has been prominently brought before the Government. There is also evidence of the extension of village and population by means of wells. In Jhang, a lease of 50 acres is given to any cultivator who sinks an ordinary well, and a lease of 100 acres for a well with a double Persian wheel. The Deputy Commissioner reports 387 such leases, and states that applications for them are increasing. The Punjab, as a whole, exhibits a rapid extension of cultivation, with a corresponding growth of population, promoted by irrigation and roads; and without the intervention of European or Native capitalists on a large scale.

THE CENTRAL PROVINCES.—These Provinces exhibit the rapid peopling of long uncultivated or depopulated tracts. They also present in a striking light the difficulties of Government intervention. The best known case of such intervention was the Charwa scheme. The failure of this scheme has operated, perhaps more than any other example, as a discouragement to Government efforts at colonization.

Another prominent case in the Central Provinces is the reclamation in the Nimar District. The circumstances of this reclamation show exactly what can be done by direct official agency, both under British and Native rule. They also show that in such attempts, the Government must be prepared for a long continuous period to exercise a close supervision, not only in regard to advances and digging wells, but even in such particulars as re-roofing houses injured by fire.

The materials collected for the Central Provinces Tenancy Act showed that, apart from direct efforts by the Government, its general land system is leading to a rapid increase, both in the cultivation and in the number of cultivators, and also in the more intensive husbandry which results from the breaking up of holdings. One great difficulty in the way of direct Government effort seems to be that in certain parts of the Central Provinces, as in parts of Bengal, the clearers of jungle are not the eventual cultivators of the soil. In the District of Sambalpur, the process is described as follows, "The first settlers are Kandhs, propelled by the pressure of better agriculturists, such as the Agharyas from behind. They are the hardiest caste in this part of India. As soon as they (the Kandhs) have cleared a portion of the jungle with their fire-and-axe cultivation and rendered it habitable by less vigorous but more intelligent cultivators, they advance onward and are succeeded by Agharyas; and eventually the Agharyas are in turn driven onwards by the Kultas, our best a griculturists. This is the order in which cultivation is extended, and no instance has been brought to light in which waste lands—including under that term good arable land which has not as yet been brought under cultivation, but capable of the highest cultivation—have been first cleared and broken up by cultivating castes coming from an open country."

Madras.—The expansion of agriculture has there been steady and spontaneous, and the only check upon its further extension is stated by one officer to be the want of roads to the still land-locked localities.

SIND .- The problem of reclamation in Sind is the problem of irrigation.

BURMA.—In Burma land is still so plentiful that the old wasteful system of nomadic cultivation goes on side by side with the settled tillage of the plough. The efforts made by

the Chief Commissioner to promote the extension of agriculture form a salient feature in the Local Administration. Such extension takes place partly by means of temporary agricultural immigrants from Bengal and elsewhere, partly by the gradual settling down of the nomadic cultivators into regular husbandmen, partly by the rapid increase of the population, and partly by direct Government efforts. In Burma, the question is directly and inseparably connected with the system of rules for leasing waste lands.

Assam.—The same remarks apply to the outlying Province of Assam. But this province has formed the scene of the most interesting effort at direct agricultural colonization on a considerable scale which has taken place of late years. The Norwegian or Danish Missionaries in the Santál country on the west of Bengal, led forth a regular agricultural colony across the whole centre of the province, and settled it in Assam.

There is evidence to show, first, that an enormous expansion of agriculture is steadily and spontaneously going on in the less thinly populated parts of India. Second, that, direct efforts at agricultural colonization, whether by Government or companies or by private individuals, have frequently failed. Third, that there are, however, conspicuous examples of success. Fourth, that in such efforts, the chief difficulties lie at the outset, and that in most cases, a large initial mortality must be expected. Fifth, that the two essentials of success are close personal supervision, and persistent continuity of effort.

(b) Includes the Katni-Umaria State Railway.
(c) Includes the Heliary-Kistna State Railway.
(d) Total Receipts from 15th to 24th September, 1887.

⁽e) Includes the Amritsar-Pathánkot and Rájpura-Patiála State Railway (f) Includes the Northern Bengal, Dacca, Kaunia-Dharila and Assam State Railways.

SUPPLEMENT

The Gazette of Andia.

CALCUTTA, SATURDAY, OCTOBER 27, 1888. No. 43.}

OFFICIAL PAPERS.

A SUPPLEMENT to the GAZETTE OF INDIA will be published from time to time, containing such Official Papers and information as the Government of India may acem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in PART VI of the GAZETTE.

TVI of the GAZETTE.

Non-Subscribers to the GAZETTE may receive the Supplement separately on a payment of five Rubbes per annum if vered in Calcutta, or eight Rubbes if sent by Post. The Supplement and Part VI of the Gazette can also be vered in Calcutta, or eight Rubbes if sent by Post. Cribed for separately on a payment of Rubbes six per annum if delivered in Calcutta or Rubbes nine if sent by Post. No Official Orders or Notifications, the Publication of which in the Gazette of India is required by Law, or which as been existed to outlish in the Calcutta Gazette, will be included in the Supplement. For such Orders and iffications the body of the Gazette must be looked to.

E. J. SINKINSON,

DEPARTMENT OF FINANCE AND COMMERCE,

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—For week ending 20th October, 1888.—Rainfall: none in Ganjam; fair in Madras, Tinnevelly and Madura, and poor elsewhere. Standing crops generally good, but withering in Ganjam, Vizagapatam, Kistna, Cuddapah and Salem, and damaged by insects in parts of Ganjam, Vizagapatam, Salem, and Tinnevelly. Want of rain felt in all districts except South Arcot, Nilgiris and South Canara. Pasture scanty in Kistna, Trichinopoly and Madura, and insufficient in Cuddapah and Salem. Agricultural operations progressing. Prices rising in ten districts, falling in three and stationary in others. General prospects fair, except in Ganjam and Vizagapatam, where they are very unfavorable. Merchants in Ganjam holding back stocks, and rice is selling higher than scarcity rate.

Bombay.—For week ending 24th October, 1888.—Slight rain during the week in parts of Broach, Surat, Poona, Bijapur, Dharwar, and Kanara. Total rainfall generally insufficient, and more rain required urgently in most districts for preservation of standing early crops and sowing of late crops. Standing crops withering throughout Guzerat, Konkan and Kathiawar and in parts of Nasik for want of moisture, and damaged by insects in parts of Karachi and by blight in parts of Hyderabad and Bijapur. Harvesting of early crops progressing in parts of Karachi, Shikarpur, Hyderabad, Ahmedabad, Kaira, Surat, Khandesh, Nasik, Thana, Colaba, Poona, Bijapur, Belgaum, Kanara, and Kathiawar. Sowing of late crops in parts of Shikarpur, Hyderabad, Upper Sind Frontier, Kaira, Surat, Khandesh, Ahmedangar, Sholapur, Bijapur, Belgaum, Dharwar, and Kathiawar. Probable outturn of early crops in Thana from 8 to 9 annas. Fodder scarce in parts of Karachi, Kaira, Khandesh, Nasik, Poona, Baroda, and Kathiawar. Scarcity of water felt in parts of Broach, Nasik, Kathiawar, and Baroda. Prices rising in parts of Surat, Nasik, Sholapur, and Kanara.

Bengal.—For week ending 23rd October, 1888.—No rain, and the weather is becoming cool. Except in the eastern districts which have had good rain lately, the condition of the rice crop is not satisfactory. The rice on high and unirrigated lands is suffering much for want of rain, and if there be no rain shortly the crop generally will be short, and in some parts of Behar will be a failure. Rabi cultivation is also in want of rain, and sowings are backward in Behar with no rain. There is a sensible rise in the price of rice throughout Behar and in some other parts of the province also. Distress in Khurdah has diminished. No further report of the distress in the flooded tracts of the Burdwan and Presidency Divisions received.

North-Western Provinces and Oudh.—For week ending 24th October, 1888.—Weather seasonable. Kharif crops being harvested. Rabi ploughing and sowing in progress. Rain wanted in some places. Supplies ample and prices on the whole are steady. General condition of agricultural stock is good.

Punjab.—For week ending 24th October, 1888.—No rain. Prices are somewhat unsettied; rise is reported from Sialkote and Rawalpindi and fall from Shahpur; in others prices are stationary. Reaping and harvesting of kharif crops are going on. Ploughing for, and sowing of rabi crops continue. Rain wanted at Hissar. Crops are suffering for want of rain in parts of Lahore and Dera Ismail Khan, and those dependent on Bara Canal in Peshawar have almost dried up. Prospects and outturn on the whole fair. No damage done to crops. Stock cattle are reported healthy. Fodder sufficient, except in Hissar and Dera Ismail Khan.

Central Provinces.—For week ending 24th October, 1888.—Weather clear. The early cessation of rain has injured prospects of autumn crops; rice especially has suffered in Eastern districts. Winter sowings progressing, but rain is required for them. Prices rising.

Burma.—For week ending 20th October, 1888.—In Lower Burma the crops are still reported as progressing favourably. Slight damage was done to crops in Thongwa and Amherst districts by floods and drought respectively. In Upper Burma transplanting continues in one or two districts, and in some places early sowings are being reaped. In Lower Burma the rainfall was seasonable. In Upper Burma rain fell in three districts only, and is much wanted in Myingyan and in Meiktila, where some paddy plants are reported to have withered away from want of rain. In Lower Burma crop prospects are good everywhere, and in Upper Burma the outturn of harvest is expected to be better than last year. In Pakokku a good harvest is expected if the rains at the end of the month are favourable; and in Minbu the estimated area under paddy cultivation is reported to be 40 per cent. more than last year. The price of paddy has risen in Moulmein, Shwegyin, Toungoo, and Mandalay, and has fallen considerably in Yamethin, Meiktila, Sandoway, Ye-u, and Kyaukse, and slightly in Henzada and Sagaing.

Assam.—For week ending 24th October, 1888.—Weather seasonable and cold. Sowing of pulses nearly over; that of oil-seeds continues. More rain would do good. Tea doing well. Prospects of rice crop favorable.

Mysore and Coorg.—For week ending 24th October, 1888.—Rainfall slight throughout the State. In parts of Bangalore, Kolar, Tumkur, and Mysore districts crops need more rain. Dry crops are being harvested in parts; outturn generally favourable.

No rain in Coorg during the week. Rain much needed for maturing rice crops and coffee seedlings.

Berar and Hyderabad.—For week ending 24th October, 1888.—No rain during the week. Crops in fair condition, but more rain is wanted. Weeding of Jowari, cotton, &c., completed. Picking of cotton commenced in some places. Sowing of rabi in progress. Fodder and water insufficient. Prices of grain increasing.

Slight rain in Hyderabad during the week. Kharif crops withering and rabi sowings impeded for want of rain. Scarcity of fodder in all taluks. Prices rising.

Central India.—For week ending 24th October, 1888.—No rain. Rainfall insufficient in Indore, Bhopal, Bundelkhand, and Baghelkhand, and badly wanted in Bhopawar and Neemuch. Probable outturn of crops indifferent in Western Malwa. No other changes since last report.

Rajputana.—For week ending 24th October, 1888.—Very slight rainfall during the week. Agricultural operations unsatisfactory in Kherwara, Meywar and Kishengurh. Standing crops want rain in Kotah and Harowtee. Harvest poor generally. Agricultural stock good. Pasturage or fodder scarce in Kherwara, Meywar, and in some parts of Marwar and Jeypore. Prices still rising in some places.

Nepal.—For week ending 18th October, 1888.—No rain. Weather cool. Late autumn rice is being harvested. Good crop of Marwa and Kodo expected.

W. R. LAWRENCE,

Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA. REVENUE AND AGRICULTURAL DEPARTMENT.

Cir. No. $\frac{95}{19-3}$ Arch.

Extract from the Proceedings of the Government of India, in the Revenue and Agricultural Department (Archæology),—dated Simla, the 18th October, 1888.

Read again the following extracts from the Proceedings of the Government of India, in the Home Department:

No. 4 (Archwological),—dated Simla, the 11th August 1885.

In 1882 Her Majesty's Secretary of State, when sanctioning the appointment of Mr. Fleet as Epigraphist to the Government of India, suggested the desirability of training Native scholars in such a way as to fit them hereafter for taking a prominent place in the prosecution of historical research. Mr. Fleet, whose opinion was obtained on this suggestion, advised that Professors of Sanskrit in Government Colleges should form classes of selected students for special training in epigrahical and historical researches. He observed that, with such a preliminary training, a few students would be secured who would be fitted to commeace under him the more rigid study of critically examining new inscriptions, of translating and editing them, and of disposing of their contents in a scholarlike manner.

- 2. The views of Local Governments and Administrations were invited on the suggestions made by Mr. Fleet. From these letters it appears that the adoption of Mr. Fleet's suggestion regarding the formation of palæographic classes under Sanskrit Professors in Government Colleges is not practicable. The time of the Professors is already fully occupied with their ordinary duties, while it is doubtful whether, if such classes were formed, students would, under present circumstances, be forthcoming to attend them. There is a general agreement, however, that the Universities might with advantage be moved to make Indian palæography an optional subject for the higher degrees; and the Governor General in Council would be glad if the Governments of Madras, Bombay, and Bengal would move the Universities of their respective provinces to consider what steps should be taken for attaining this object. It is observed that the Government of Madras has already consulted the Syndicate of the Madras University, and that the Government of Bengal proposed to address the Senate of the Calcutta University on the subject. The question who ther similar action might not usefully be taken in regard to the Punjab University will doubtless be considered by the Local Government.
- University will doubtless be considered by the Local Government.

 3. In order further to encourage the education and training of natives of India in epigraphy, the Governor General in Council would suggest that a special prize of Rs. 500 should be offered by the Local Government annually at each University to the student who does best in this subject, if he is recommended for it by the Examiners. This prize would probably be supplemented by the liberality of the private gentlemen interested in the ancient history of their country, if their attention were invited to the subject. His Excellency in Council is also pleased to direct that an annual prize of Rs. 500 be offered for the best collections of inscriptions with a critical essay on them by bond fide graduates of the Universities under 30 years of age. The essays should be sent to the Epigraphist to the Government of India on or before the 1st April of each year, and the amount of the prize will be charged in the contingent bill of the Epigraphist. The selected essay will be printed at the expense of Government. Lastly, in order to encourage the study of epigraphy among the Surveyors and Assistant Surveyors employed in the Archæological Survey Department, the Governor General in Council sanctions the grant of a reward of Rs. 500 to any employé of that Department who qualifies in epigraphy within two years from the date of his appointment to the Department.
- 4. As regards British Burma, the circumstances of which province are peculiar and which does not fall under the scope of the above orders, it will be left to the Chief Commissioner to take such steps as he may deem necessary for encouraging the study of epigraphical research among Native students and others.

No. 11. (Archwology),—dated Calcutta, the 18th January 1886.

In paragraph 3 of the Resolution, dated 11th August 1885, it was decided—

(1) that a special prize of Rs. 500 should be offered by the Local Government annually at each University to the student who does best in epigraphy, if he is recommended for it by the Examiners;

(2) that an annual prize of Rs. 500 be offered for the best collection of inscriptions, with a critical essay on them, by bond fide graduates of the Universities under 30 years of age, the essay to be sent by 1st April of each year to the Epigraphist the Government of India; and

graphist to the Government of India; and

(3) that a reward of Rs. 500 should be given to any Surveyor or Assistant Surveyor in the Archæological Survey Department who qualifies in epigraphy within two years from the date of his appointment to the Department.

The Governor General in Council sees no ground for modifying or expanding the first two of these proposals; but as regards the third point, His Excellency in Council is willing to grant a reward of Rs. 500 to any employé of the Archæological Survey who qualifies in epigraphy at any period of his service in the Department. The reward will be given for a competent knowledge in any one or more of the ancient languages of India, but cannot be earned more than once during service. be earned more than once during service.

Communication from the Government of Madras, No. 980 (Public), dated 13th May 1886. Letter from the Government of Bombay, No. 17, dated 7th January 1887.

Bengal, No. 457-T , dated 29th May 1886. , to the Government of the North-Western Provinces and Oudh, dated 27th September 1887.

Letter from the Government of the North-Western Provinces and Oudh, No. 1119 111-189-91 dated 31st August 1888.

RESOLUTION.

From the Resolution of 1885, it will be seen that Her Majesty's Secretary of State when sanctioning the appointment of Mr. Fleet as Epigraphist to the Government of India, suggested the desirability of training Native scholars in such a way as to fit them to take a prominent place in the prosecution of historical research. Mr. Fleet, who was consulted on the subject, recommended that Professors of Sanskrit in Government Colleges should form classes of selected students for special training in epigraphical and historical researches. Local Governments were addressed accordingly on the subject, but on receipt of their replies the Government of India came to the conclusion that it was not expedient to adopt the suggestion put forward by Mr. Fleet. It was, however, thought desirable that Indian Universities should make Palæography an optional subject for the higher degrees; and in order to further encourage the study of epigraphy, a system of moderate money-rewards for proficiency in that branch of learning was established. From the replies of the Local Governments read above, the Government of India learns with satisfaction that the Syndicates of the several Universities in Madras, Bombay, Bengal, and the North-Western Provinces and Oudh, have resolved to allow Palæography to be studied as an optional subject for the higher degrees.

In paragraph 3 of Resolution mentioned above, it was said that the essays on inscriptions should be sent to the Epigraphist to the Government of India on the 1st of April of each year. As the appointment of Epigraphist to the Government of India has since then been abolished, the essays should be transmitted to

the Director General of the Archæological Survey of Índia.

ORDER.-Ordered, that the above Resolution be forwarded to the Local

The Government of Madras. Bengal. N.-W. P. and Oudh. Chief Commissioner, Central Provinces. n n 4 Burma. Assam. Coorg. Resident at Hyderabad.

Governments and Administrations noted on the margin for information; also that it be forwarded to the Director General of the Archæological Survey of India and the Department of Finance and Commerce, and Home Department, and that it be published in the Supplement to the Gazette of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF FINANCE AND COMMERCE.

STATISTICS AND COMMERCE.

Review of the working of the Indian Companies Act, VI of 1882, during the year 1887-88.

No. 5861, dated Simla, the 26th October, 1888.

RESOLUTION-By the Government of India, Department of Finance and Commerce.

Read the following communications submitting the Reports of Registrars of Joint Stock Companies on the working of the Indian Companies Act, VI of 1882, during the official year 1887-88

From the Government of Madras, Nos. 1292 and 1293, dated the 9th June 1888.

From the Government of Bombay, No. 4258, dated the 28th June 1888.

From the Government of Bengal, No. 2493-P., dated the 21st July 1888.

From the Government of the North-Western Provinces and Oudh, No. 521

VIII—117-B. dated the 16th July 1888.

From the Government of the Punjab, No. 21, dated the 27th April 1888.

From the Chief Commissioner, Central Provinces, No. 5003/2617 dated the 24th August 1888.

From the Chief Commissioner, Burma, No. 317/25-67, dated the 11th June 1888.

From the Chief Commissioner, Assam, No. 4780, dated the 28th August 1888. From the Secretary for Berar to Resident, Hyderabad, No. 191-G., dated the 23rd May 1888.

From the Resident in Mysore, No. 2461 and No. 2830, dated respectively the 20th July and the 22nd August 1888.

RESOLUTION.—The statistics contained in these reports are summarised in the three tables annexed to this Resolution. There were at the close of in the three tables annexed to this Resolution. There were at the close of 1886-87 in the different provinces 888 joint stock companies possessing a total nominal capital of 2,913 lakhs, the actual (paid-up) capital being 2,138 lakhs. Of these companies the capital of 40 was increased nominally by 28½, but actually by only 1½ lakhs; while 103, with a paid-up capital of 4 lakhs, so far as reported, ceased to work. The number of companies registered during the year with a naminal capital of 105 lakhs; but their paid-up capital capnot be reported, ceased to work. The number of companies registered during the year was 125, with a nominal capital of 195 lakhs; but their paid-up capital cannot be completely stated, the amount of such capital not having been reported in several cases up to the end of the year. The net result at the close of 1887-88 was a total of 910 companies possessing a nominal capital aggregating 3,025 lakhs, and an actual capital, so far as reported, of 2,233 lakhs.

2. The following table shews the number of companies and the amount of paid-up capital in each of the provinces in the last two years:

		ANIES.	PAID-UP	CAPITAL.	INCREASE OR DER CENT. IN	DECREASE 1887-88.	Provincial pro- portion of paid- up capital to

	GRAND TOTAL	910	30,25,42,842	22,32,61,92

The largest part—960 lakhs paid-up—of the aggregate capital is invested in mills and presses chiefly for working or pressing cotton, jute, wool, and silk. The greater number of these are registered in Bombay, that Presidency representing under this head a paid-up capital of 663 lakhs, or about two-thirds of the whole, most of it invested in cotton mills and presses. The sum of 196 lakhs represents the paid-up capital invested in mills and presses registered in Bengal, their working being mainly limited to jute.

In tea, coffee, and other plantations 365 lakhs of paid-up capital are invested, of which 346 lakhs are held in Bengal, most of the tea companies being registered in Calcutta.

The paid-up capital invested in banking or loan companies amounts to 342 lakhs, of which 175 lakhs are in companies registered in Bengal and 93 lakhs in Madras.

Trading companies have a paid-up capital of 341 lakhs, of which 89½ lakhs are invested in coasting and river steamer companies and about 69 lakhs in railways and tramways. Of the sum of 173 lakhs placed opposite "merchants and traders" in the foregoing table, a considerable proportion is invested in retail shops and stores to which the principle of limited liability has been somewhat extensively applied in India, especially in Bombay.

Mining and quarrying companies engage 101 lakhs paid-up, of which 80 lakhs are invested in companies registered in Bengal, where about 60 lakhs are invested in coal mining companies.

The other industries individually represent much smaller sums; thus ice-making employed 19 lakhs paid-up, chiefly in Bombay and Bengal; breweries, 12 lakhs paid-up, all in the Punjab and the North-Western Provinces and Oudh.

Particulars in regard to each company registered under the Act will be found in Part XVI of the "Statistical Tables for British India" published annually.

4. The following table shows the number of Companies under each category during the last five years:

Con	spanies.	1883-84.	1884-85.	1885-86.	1886-87-		Increase or decrease per cent. in 1887-38 compared with 1883-84.

The increase during the year was $94\frac{1}{2}$ lakhs, being at the rate of $4\frac{2}{5}$ per cent, which was much higher than in the two previous years. The average annual rate of increase during the eight years has been $5\frac{1}{4}$ per cent.

6. The statistics of companies limited by guarantee have apparently been defectively reported. The figures, so far as they go, show that there were 191 such companies at the close of 1886-87, almost all in the Madras Presidency, being mostly small benefit societies, of a speculative and not infrequently fraudulent character. A great number of these companies was started in 1885-86 in Madras, collapsing after a year or two. One hundred and fifteen ceased to work in 1887-88. Three new companies being added, there were 79 such companies at the close of the year. panies at the close of the year.
7. The fees realised and the expenditure in each province last year
